

ASTM Section D02.B0.10

Minutes of Meeting on December 4, 2006

Call to Order

ASTM Section D02.B0.10 on Standards Acceleration met on Monday, December 4, 2006 at 8:30 am in Salon III at the Hilton at Lake Buena Vista, Florida. There were six members in attendance. The attendance list is shown in Attachment 1.

Minutes for June 26, 2006

The June 26, 2006 meeting minutes were approved.

Membership

Section 10 membership was reviewed. The current membership list is shown in Attachment 2.

Facilitator Reports

Reports from facilitators were received. Written reports submitted are shown in Attachment 3. The Sequence IIIG test method was balloted within Subcommittee B and Committee D02. Both ballots passed with no negatives. Several editorial comments from affirmative voters were received. The draft for the ISB has been released to the assigned facilitator. Drafts for the C13, T-12, and L-42 are expected to be released to their assigned facilitators in the near future. Eleven revised test methods, incorporating changes from previously approved information letters, were balloted at the D02 level. No negative votes or comments were received.

Facilitator Assignments

Current facilitator assignments were reviewed (see Attachment 4). At this time, the section knows of no other test methods needing facilitation and, consequently, there is no need for any new facilitators.

Next Meeting

The next meeting is scheduled for June 18, 2007 in Miami Beach, Florida.

Adjournment

The meeting was adjourned at approximately 9:00 am.

John L. Zalar
Chairman, ASTM D02.B0.10

Facilitator Report to ASTM Section D02.BO.10 Standards Acceleration

Facilitator: Terry Bates

Report period: July 2006 to Dec 2006

Cummins ISB method

Following a recent conference call, the Cummins Surveillance Panel made some final changes to the procedure. After these have been incorporated, it is anticipated that the method will be available for editorial facilitating in December 2006.

REPORT TO SECTION B0.10

December 4, 2006

Since the June 2006 meeting, about 25 hours have been spent in three areas; i.e., 15 hours preparing revisions of eleven existing standards for D02 ballot (utilizing approved information letters), 6 hours reviewing proofs of approved D02 ballot items, and 4 hours reviewing proposed information letters,.

No negative votes or comments were received on the eleven D02 ballot items.

T-12

The surveillance panel continues to work toward resolving some minor issues in the test method. The panel meets during this committee week, and hopefully they will release the document to me soon.

L-42-1

The L-42 surveillance panel is unable to decide what to do with this proposed test method. The panel is divided between developing the L-42-1 or the old L-42 method. No timeframe has been established to determine what step to take next.

Respectfully submitted,
E. A. Hap Thompson
