# B0.07 Bench Testing Executive Summary

## ▶ D874 (Sulfated Ash)

- ▶ For the fourth consecutive 6-month period, there were no tests which failed to meet acceptance criteria for D874. Reference test results continue trending mild and new Reference Oil 92 is in the process of replacing Oil 90 which is not available as a reblend.

## ▶ D5133 (Gelation Index)

- ▶ Nine labs are running GI, same as last period, but three units fell out of calibration this period. GIC18, a new Reference Oil with a performance target close to the Pass/Fail limit of 12, collected 30+ runs (from 7 different labs) and is ready for reassessment / confirmation of reference oil test targets.

## ▶ D5800 (NOACK)

- ▶ Two new labs and one former lab brought eleven stands into calibration this period. CUSUM slope turned back towards SEVERE after being MILD in the previous semester.

# B0.07 Bench Testing Executive Summary

- ▶ **D6082 (High Temperature Foam)**
  - ▶ For the fourth consecutive 6-month period, there were no tests which failed to meet acceptance criteria for HT Foam calibration testing.
- ▶ **D6335 (TEOST)**
  - ▶ Test fail rate improved to 13.3% after being at 20% last semester. Precision is also improving, and Performance is on-target (0.03 s).
- ▶ **D6417 (GC Volatility)**
  - ▶ One less test lab (6) reported data this semester and no failing Calibration Runs in this period for the eight instruments.
- ▶ **D6557 (BRT)**
  - ▶ Average Gray Value (AGV) has returned to a slightly mild trend this semester after a severe run over the last two periods. But overall, CUSUM has been relatively “flat” for the past six years (since April 2017).

# B0.07 Bench Testing Executive Summary

## ▶ D6594 (HTCBT)

- ▶ New Chairperson for HTCBT Surveillance Panel has been identified. New Reference Oil 44-5 completed 30+ tests and is now ready for target confirmation/reassessment evaluation. Only 2.6 gallons of Reference Oil 44-4 remain. Reblend Oil 44-5 is now available as a replacement for 44-4. Test severity issues have abated and a significantly fewer number of Calibration Run fails occurred this semester.

## ▶ D6794 (EOWT)

- ▶ Change in Flowrate Average (CIFA) continues to trend severe for all water treat rates. Slight abatement of the severe trend observed in last semester has ended.

## ▶ D6795 (EOFT)

- ▶ Change in Flow Average (CIFA) is trending severe with a very consistent CUSUM slope over the past three years.

# B0.07 Bench Testing Executive Summary

## ▶ D7097 (MTEOS)

- ▶ Precision regressed slightly moving to 7.42 s, whereas Performance continued to improve moving from 0.41 s down to 0.31 s this period. Most operationally valid tests this period report using Rod Batch N and Catalyst Batch 20AB, although one test used Catalyst Batch 23AB. No labs used Catalyst Batch 19BA.

## ▶ D7216 (EOEC/LDOEC)

- ▶ No tests on Ref Oil 1006 as all testing has moved to Ref Oil SL-107. Surveillance Panel has agreed to resume Adjustment Factors for EOEC. Several labs participated in Round Robin tests of ACM1 batch 25 vs batch 26 to understand what would be the result of returning to a previous manufacturing method for the Polyacrylate elastomer. TMC will officially monitor the EOEC/LDEOC bench tests, adding a section to LTMS. And new elastomer types will be added to LDEOC (GF-7) and EOEC (PC-12) within the next year.

## ▶ D7528 (ROBO)

- ▶ Precision continues to stay around 0.20 and about 0.05 units higher than target (0.15). Performance returned to mild (-0.11) but has been close to “zero” for the past three semesters. CUSUM severity plot shows a third consecutive period of relatively ‘flat’ CUSUM after many periods of trending Mild. Two labs did not report any runs this period.

# D5133: Gelation Index

- ▶ Fail rate of operationally valid tests improved to 8.8% this period
  - Fail rate last period was 17%
    - No (zero) operationally valid discrimination runs failed this period
- ▶ Precision (Pooled s) returned to target after poor precision last semester
- ▶ Performance (Mean  $\Delta/s$ ) is  $-0.21$  s, slightly more mild than last period
- ▶ Reference Oil GIC18 has now been included in calibration testing for two semesters
  - Twenty-nine GIC18 tests were completed this semester (7 Labs)
  - GIC18 targets will be revisited now that  $>30$  test have been completed
    - GIC18 replaced RO 58 which was reclassified as a discrimination oil

# D5800: Evaporation Loss of Lubricating Oil by Noack Method

## Operationally Invalid Tests (LC)

Five operationally invalid calibration runs were reported this period

- Test was invalidated due to Power Outage
- Test invalidated when determined test ran beyond 60 minutes
- Test invalidated by TMC because no Daily QC was run with Calibration
- Test invalidated by lab when cleaning material found in orifice after completion
- Test invalidated when lab determined that wrong oil was run

## D5800 Technical Memos

No D5800 technical memos were issued by the TMC this period.

# D5800: Evaporation Loss of Lubricating Oil by Noack Method: Semester Summary

Precision (Pooled  $s$ ) moved slightly further from target this semester as former and new labs returned to monitoring and reported several failing calibration attempts.

Performance (Mean  $\Delta/s$ ) returned towards a severe path at  $+0.33$   $s$  after being mild (at  $-0.15$   $s$ ) the previous semester.

- Procedure B rigs continue to trend severe ( $0.98$   $s$ ) while Procedure D rigs continue to trend mild ( $-0.56$   $s$ ).

CUSUM plot once again turned towards severe as has been the observed trend for many years (except last semester). This is due to severe test results from both Procedure B and D units in the last six months. The industry EWMA Control Chart had several Severe Warning Alarms last semester (and continues to have alarms this semester).

Foam Tendency, ml

April 1, 2023 – September 30, 2023

**Test Monitoring Center**  
<https://www.astmtmc.org>

# D6082: High Temperature Foam

- ▶ Foam Tendency Precision (Pooled s) has improved over last period
  - All reference tests were conducted on reference oil FOAMB18.
- ▶ Performance (Mean  $\Delta/s$ ) remains mild at  $-0.68$  s and constant with last semester ( $-0.69$  s)
  - Fifth consecutive period of  $-0.5 +$  s mild performance with FOAMB18.
    - Target performance, set on 18 runs in a RR, may need revisited.
- ▶ No non-zero occurrences of Foam Stability
- ▶ All seven severe oil discrimination runs (on TMC oil 66) demonstrated acceptable discrimination on foam tendency ( $>100$  ml).

# HTCBT Test Status

- ▶ New Chairperson for HTCBT Surveillance Panel has been identified: Jared Cavaliere
- ▶ New Reference Oil 44-5 has completed over 30 Valid tests since its initial introduction and is now ready for target and Pass/Fail analyses
- ▶ Only 2.6 gallons of Reference Oil 44-4 remain
- ▶ Test severity issues have abated and a significantly fewer number of Calibration Run fails occurred this semester.

# Reference Oil Inventory Estimated Life EOEC/LDEOC

Oil	TMC Inventory Gallons	Gallons Shipped Past 12 Months	Estimated Life <sup>C</sup>
SL107 <sup>A, B</sup>	1971	203	3.4 years

<sup>A</sup>TMC Inventory is used across several test methods

<sup>B</sup>SL107 has fully replaced oil 1006; Oil 1006 is no longer used as EOEC/LDEOC Reference Fluid

<sup>C</sup>Additional Elastomer types will be added to new lubricant categories ILSAC GF-7 and PC-12 (HDEO) which will have an impact on Estimated Lifetime availability of SL107.

**Test Monitoring Center**  
<https://www.astmtmc.org>

# D7528: Oxidation by ROBO

- ▶ Precision (Pooled  $s$ ) continues to stay around 0.20 and about 0.05 units higher than target (0.15).
- ▶ Severity (Mean  $\Delta/s$ ) has returned to mild ( $-0.11$ ) but has been close to “zero” for the past three semesters
- ▶ CUSUM severity plot shows a third consecutive period of relatively ‘flat’ CUSUM after many periods of trending Mild.
- ▶ Two labs did not report any runs this period
