B0.07 Bench Testing Executive Summary

- ▶ [D874](#) (Sulfated Ash)
 - ▶ For the sixth consecutive 6-month period, there were no tests which failed to meet acceptance criteria for D874. Reference test results continue trending mild. Reference Oil 92 has been exclusively assigned to labs to generate test results to establish final acceptance bands.
- ▶ [D5133](#) (Gelation Index)
 - ▶ Number of Labs/Units running GI is the same as last period. Final Acceptance Bands for Reference Oil GIC18 was established and approved by Surveillance Panel in May .
- ▶ [D5800](#) (NOACK)
 - ▶ Fourteen labs (and two new stands) had successful calibrations this semester. Several EWMA alarms this semester – all severe.

B0.07 Bench Testing Executive Summary

- ▶ [D6082](#) (High Temperature Foam)
 - ▶ New FOAMB18 Acceptance Targets were established and approved by Surveillance Panel in June 2024.
- ▶ [D6335](#) (TEOST)
 - ▶ Test fail rate at 22.0% was similar to last semester (23.5%). Reference Oil 75-2 has replaced batch 75-1 with the same Acceptance Band range.
- ▶ [D6417](#) (GC Volatility)
 - ▶ Precision and Performance running on-target with no calibration fails this semester.
- ▶ [D6557](#) (BRT)
 - ▶ A lot of activity in BRT this semester. A Round Robin was conducted on new ball bearing Batch E. SP voted to accept the new ball bearings with existing Acceptance Band Ranges. Reference Oils 86, 87 and 820-1 were suspended from assignments at some point during the semester. At this time, only RO 1006 is being assigned for calibration tests.

B0.07 Bench Testing Executive Summary

▶ D6594 (HTCBT)

- ▶ Two labs (three stands) have come back on-line this semester. Some labs have now moved on to Batch P coupons after a Round Robin was completed on Batch p coupons to establish initial Targets and Acceptance Ranges.

▶ D6794 (EOWT)

- ▶ Change in Flowrate Average (CIFA) continues to trend severe for all water treat rates except 0.6% which is on-target this semester. Reference Oil 79 has approximately three semesters of inventory available.

▶ D6795 (EOFT)

- ▶ Change in Flow Average (CIFA) is trending severe with a very consistent CUSUM slope over the past 4 years. Reference Oil 79 has approximately three semesters of inventory available.

B0.07 Bench Testing Executive Summary

▶ [D7097](#) (MTEOS)

- ▶ Precision regressed moving back to 7.57 s, as did Performance moving back to 0.43 s this period. All operationally valid tests this period report using Rod Batch N. Many labs have now moved to Catalyst Batch 23AB, but some labs are still using Catalyst Batch 20AB. No labs used Catalyst Batch 19BA.

▶ [D7216 EOEC](#) / [D7216 LDEOC](#)

- ▶ All calibrations are using Ref Oil SL-107. Surveillance Panel has agreed to resume Adjustment Factors for EOEC. In preparation for the new HNBR elastomer for EOEC, a Round Robin is being conducted to establish targets and acceptance bands. For LDEOC, four new elastomers have been identified for GF-7 and calibrated tests are available for scheduling through TMC.

▶ [D7528](#) (ROBO)

- ▶ Precision fell slightly to 0.19 (target 0.15). Performance moved very mild (-0.72) the mildest Performance has been in several years. One lab came back on-line after not having a calibration status last semester.

- ▶ With the suspension of Reference Oils 86 and 87 due to severe test results, most data was generated on Reference Oil 1006 (High Reference Oil) and Reference Oil 82-1 (Low Reference Oil). However, Reference Oil 82-1 started to show a mild trend, and it was subsequently also removed from assignment rotation leaving only Reference Oil 1006 available for assignments.
- ▶ Ball Bearing Batch E was tested to determine if it could be a replacement for current Ball Bearing Batch D. Data supported the replacement and Batch E Ball Bearings are now being used in the BRT with no change from the current Acceptance Bands for Reference Oils 1006 and 82-1. A follow-up Round Robin with RO's 86 and 87 with Ball Bearing Batch E has just recently started.
