

LDEOC/EOEC SURVEILLANCE PANEL

A LDEOC/EOEC conference call was held on 2-2-23, at 9 am Central Standard Time. The following esteemed members were on the call:

Mike Birke – SwRI
Vince Donndelinger - Lubrizol
Robert Stockwell – Oronite
Laura Birnbaumer - Oronite
Becky Grinfield – SwRI
Joe Franklin - Intertek
Kimberly Gutierrez - Intertek
Olivia Schmitz - SwRI
Jason Bowden – OHT
Charles Nystrom – SwRI
Maggie Smerdon – Savant
Matt Bowden – OHT
Adam Ramos - SwRI
Greg Miiller - Savant

The purpose of the meeting was to review the SL107 within lab and between lab standard deviations and compare them to 1006 data (presentation attached). The consensus was the data was comparable. Joe Franklin mentioned that prior to 2008 the standard deviations used to be updated and we need to reinstate the process. Joe made a motion to accept the SL107 standard deviations as presented, as well as to reinstate the process of updating them annually. There was a second to the motion by Robert Stockwell, and the motion passed unanimously. The standard deviations will be updated February 1st of each year as a two year rolling average. John Loop will provide the TMC link to the deviations once available. Laura Birnbamer will have the link added to D4485 and the expectation is the new deviations will go into effect after the 2023 June ASTM meeting. Meanwhile John will work on updating the report forms. Mike Birke and John will also be working offline to update the D7216 procedure. Vince Donndelinger asked if D7216 should be added to the LTMS. Evidently this process has already been started, so John will continue working on it.

There was no new business, and the meeting adjourned at 9:20 am.

SL107 Elastomer Data: Standard Deviations

Data Collected up to LTMS Date 20221231

TMC: JGL
UPDATED: 2 FEBRUARY 2023

Background

- ▶ ASTM D 4485 ANNEX A4
- ▶ Procedure for Deriving Adjusted Specification Limits for Elastomer Compatibility
 - Method to account for the inherent test variability in the elastomer compatibility method which arises in part because batch-to-batch, sheet-to-sheet and within-sheet variations in the properties of the reference elastomers can be sufficiently large that they complicate making a decision as to whether or not a candidate oil has passed the elastomer compatibility requirements.

TABLE A4.1 Unadjusted Specification Limits for the Elastomer Test Method as Part of the CI-4 Engine Oil Category

Elastomer	Volume Change, %	Hardness Change, Points	Tensile Strength Change, MPa	Elongation at Break Change, %
Nitrile (NBR)	(+5, -3)	(+7, -5)	(+10, -TMC 1006)	(+10, -TMC 1006)
Silicone (VMQ)	(+TMC 1006, -3)	(+5, -TMC 1006)	(+10, -45)	(+20, -30)
Polyacrylate (ACM)	(+5, -3)	(+8, -5)	(+18, -15)	(+10, -35)
Fluoroelastomer (FKM)	(+5, -2)	(+7, -5)	(+10, -TMC 1006)	(+10, -TMC 1006)

Background (continued)

Adjusted Specification Limit Standard Deviations Effective: March 1, 2008

Elastomer	Parameter	Within Lab STD	Overall STD	Total Individual Determinations
FLUOROELASTOMER	Volume	0.16	0.18	1719
FLUOROELASTOMER	Hardness	1.45	2.04	1665
FLUOROELASTOMER	Tension	4.77	5.31	1723
FLUOROELASTOMER	Elongation	7.75	10.22	1705
NITRILE	Volume	0.76	0.79	1748
NITRILE	Hardness	1.47	1.72	1696
NITRILE	Tension	8.96	9.3	1735
NITRILE	Elongation	6.99	7.07	1742
POLYACRYLATE	Volume	0.76	0.79	1768
POLYACRYLATE	Hardness	1.67	1.68	1718
POLYACRYLATE	Tension	10.09	10.12	1733
POLYACRYLATE	Elongation	11.2	11.28	1742
SILICONE	Volume	1.84	2.06	1733
SILICONE	Hardness	1.25	2.23	1661
SILICONE	Tension	6.99	7.04	1711
SILICONE	Elongation	9.87	10.02	1732
VAMAC	Volume	2.04	2.29	918
VAMAC	Hardness	1.17	1.17	898
VAMAC	Tension	8.74	9.1	900
VAMAC	Elongation	11.05	11.63	911

Background (continued)

- ▶ Initial Adjustments were based upon data from TMC 1006 Reference Oil
 - Between 898 and 1768 “individual” observations were analyzed for the various elastomer/parameter combinations to establish STD DEV for the adjustment calculations
 - Reference Oil 1006 is no longer available from TMC
 - Labs that have a few TMC1006 samples have been notified and advised to discard these
- ▶ Elastomer Testing now uses Reference Oil SL107
 - No TMC1006 samples will be assigned or used for future Elastomer Calibrations
- ▶ TMC will provide support through an analysis of SL107 Reference Oil test runs.
 - Data on SL107 EOEC Elastomer Reference Oil runs up through 31Dec2022

Calculation Method

- ▶ The Calculation Method
 - Everything in Yellow is Fixed
 - Everything in Blue depends on the TMC result

EOEC CALCULATIONS					
NBR (NITRILE)		Lower	Upper	20080308	
Fixed	Volume	0.65	5.65	-3.65	0.79
	Hardness	1	8	-6	1.72
	Tensile	7.6	17.6	-37.4	9.3
	Elongation	5.8	15.8	-58.7	7.07
Variable	Tensile	10.2		-37.4	8.96
	Elongation	8.0		-58.7	6.99
TMC Ref Result					
ACM (POLYACRYLATE)		Lower	Upper	20080308	
Fixed	Volume	0.65	5.65	-3.65	0.79
	Hardness	1	9	-6	1.68
	Tensile	8.3	26.3	-23.3	10.12
	Elongation	9.2	19.2	-44.2	11.28
TMC Ref Result					
FKM (VITON)		Lower	Upper	20080308	
Fixed	Volume	0.15	5.15	-2.15	0.18
	Hardness	2	9	-7	2.04
	Tensile	4.3	14.3	-80.3	5.31
	Elongation	8.3	18.3	-74.2	10.22
Variable	Tensile	5.5		-80.3	4.77
	Elongation	8.9		-74.2	7.75
TMC Ref Result					
VMQ (SILICONE)		Lower	Upper	20080308	
Fixed	Volume	1.68	27.60	-4.7	2.06
	Hardness	2	7	-23	2.23
	Tensile	5.7	15.7	-50.7	7.04
	Elongation	8.2	28.2	-38.2	10.02
Variable	Volume	2.1	27.60		1.84
	Hardness	1.4		-23	1.25
TMC Ref Result					
VAMAC		Lower	Upper	20080308	
Fixed	Volume	1.87	21.86	-4.87	2.29
	Hardness	1	6	-12	1.17
	Tensile	7.4	17.4	-20	9.1
	Elongation	9.5	19.5	-36	11.63

	Elongation	6.04	6.48	-25.81	1256	5.95	6.50	-36.47	307

Within Lab STD: Modeling with Batch Code and Lab Factors
 Overall STD: Modeling with Batch Code Factor (only)

Comments on Std Dev's

- ▶ Standard Deviations for TMC1006 were mostly “smaller” for All Data vs the subset data from March 2008 (Slide 6).
 - Individual Determinations = 6 rubber samples/run!?
 - Less labs running Elastomer testing than historic
- ▶ Standard Deviations between TMC1006 and SL107 are very comparable for most test parameters (Slide 7).
 - However, there are some parameters with “noticeable” differences in Standard Deviation and Mean values that may need further investigation
 - Analyses performed on Final Test Results from each run
 - Final Test Results are an Average of Six Rubber samples

Data Location

- ▶ The data used to establish Standard Deviations for EOEC Adjustments may be found here:
