TELECONFERENCE MINUTES

SINGLE CYLINDER DIESEL SURVEILLANCE PANEL

HELD SEPTEMBER 28, 2005

THIS DOCUMENT IS NOT AN ASTM STANDARD; IT IS UNDER CONSIDERATION WITHIN AN ASTM TECHNICAL COMMITTEE BUT HAS NOT RECEIVED ALL APPROVALS REQUIRED TO BECOME AN ASTM STANDARD. IT SHALL NOT BE REPRODUCED OR CIRCULATED OR QUOTED, IN WHOLE OR IN PART, OUTSIDE OF ASTM COMMITTEE ACTIVITIES EXCEPT WITH THE APPROVAL OF THE CHAIRMAN OF THE COMMITTEE HAVING JURISDICTION AND THE PRESIDENT OF THE SOCIETY. COPYRIGHT ASTM, 100 BARR HARBOR DRIVE, WEST CONSHOHOCKEN, PA 19428-2959 ALL RIGHTS RESERVED.

13:00cdt CALL TO ORDER

The teleconference began at 13:00 cdt; the participants are listed in attachment 1.

13:01cst UPDATED ANALYSIS OF 1N LINER (1Y3998) PERFORMANCE

Elisa Santos (Infineum) has compiled a revised and updated analysis of 1Y3998 liner performance (attachment 2). Chairman Jim McCord (Southwest Research) began discussion by leading Elisa through highlighting certain sections of the various analysis scenarios.

Abdul Cassim (Caterpillar) asked Scott Parke (TMC) to comment on any conclusions he would draw from Elisa's analysis. Scott declined to draw any of his own conclusions but took the opportunity to state his conviction that, in deciding between the scenarios presented, the panel should choose the one they felt most comfortable with and stay within it. He felt it would not be legitimate to select different components of different scenarios and attempt to put them together cafeteria style. Jim Rutherford (ChevronTexaco) and Abdul voiced strong agreement.

Elisa was asked to explain what the purpose was for the analysis considering all blends of 1004 to be the same oil (as mentioned on page 2 of attachment 2). She explained that whether or not to do this was a judgment call that the panel could make when they choose a scenario. Combining the oils probably gives a better estimate of the precision of the data because there is more of it but the cost is that doing so could cloud what might be a real performance difference between oils. Neither approach would be wrong, per se.

The panel was keen to know whether any of the performance difference seen thus far occurs with other oils. All were in agreement that the next round of testing needed to be on another oil. Scott Parke advised that oil 809-1 was probably the best choice of the remaining available oils. Jim McCord was concerned that the other oil not be from the same supplier or of the same technology. After the meeting, Scott determined that 809-1 was indeed from a different supplier.

With discussion of the analysis over, Bob Campbell (Afton) moved to enact the following conclusions:

1. Accept the first scenario used in Elisa's analysis (that is all oils, 250 tests, and model including lab, oil, and liner type).
2. Enact the following resulting correction factors: TGFCOR=0, WDCOR=0, TTLHCCOR=-0.451, and BSOCCF=0 effective for any 1N test using 1Y3998 liner that ends on or after September 28, 2005.
3. Use oil 809-1 for the next round of reference testing.

The motion passed by a vote of 8-0-0 (for-against-waive).

Elisa was asked to update her analysis once further tests are completed. She agreed to update once 8 further tests complete on oil 809-1.

14:05cdt OTHER BUSINESS

Chris Mazuca (PerkinElmer) pointed out that the procedure requires R_a surface finish measurement and that the 1Y3998 liners don't meet the spec. Chuck Dutart (Caterpillar) replied that R_a is not a valid measurement for plateau-honed liners (such as 1Y3998). After brief discussion of the usefulness of the measurement, Jim McCord moved that the requirement for surface finish measurement be removed from the 1K/1N procedure. The Motion passed 8-0-0.

The teleconference ended at 14:24cdt.

Attendance:

Representative	Organization
Abdul Cassim	Caterpillar
Chuck Dutart	Caterpillar
Jim Gutzwiller	Infineum
Jerry Brys	Lubrizol
Jim McCord	Southwest Research
Bob Campbell	Afton Chemical
Chris Mazuca	PerkinElmer
Riccardo Conti	ExxonMobil
Jim Rutherford	ChevronTexaco
Elisa Santos	Infineum
Scott Parke	Test Monitoring Center

Analysis of 1N by parameter: Elisa Santos Sept 16th 2005

Objective: To respond the question – Is the performance of liner 1Y3998 equivalent to the performance of 1Y3555? If not, what is the performance offset?

LN TGF Rated: No liner discrimination

There are four analyses for TGF: LN transformation was used for the analyses.

1. All oils - 250 tests with Chart = Yes: Presented below, model with Lab, Oil type and Liner type; the analysis shows that there is **no evidence that the liners are different**. Oil type seems to be marginally significant.
2. Analysis with oils 1004, 1004-1, 1004-2, 1004-3: Presented below, model with Lab, Oil type and Liner type; the analysis shows that there is **no evidence that the liners are different**. There seems to be borderlines differences among some of the labs.
3. Analysis with oil 1004-3 ONLY - because all the tests with new liners ran on oil 1004-3 - model with Lab and Liner type; the analysis shows that there is **no evidence that the liners are different (with and without test 51111)**.

WDN Rated: Marginal discrimination for oil 1004-3 ONLY

There are three analyses for WDN: No transformation was used for the analysis.

4. All oils - 250 tests with Chart = Yes: Presented below, model with Lab, Oil type and Liner type; the analysis shows that there is **no evidence that the liners are different**. Difference between Oil 1004 and 1004-3 is significant.
5. Analysis with oils 1004-1, 1004-2, 1004-3: model with Lab, Oil type and Liner type; the analysis shows that there is **no evidence that the liners are different**. There seems to be differences among labs.
6. Analysis with oil **1004-3 ONLY** - because all the tests with new liners ran on oil 1004-3 - model with Lab and Liner type; the analysis shows that there is **marginal evidence that the liners are different** (the analysis is presented below). The difference between the liners is 7.033 and applies just to oil 1004-3: liner 1Y3555 higher than 1Y3998. There is evidence that Lab B1 has higher values of WDN.

LN TLHC Rated plus one: Liner discrimination

7. All oils - 250 tests with Chart = Yes: Presented below, model with Lab, Oil type and Liner type; the analysis shows that **there is evidence that the liners are different**. The difference between the liners is -0.451 and applies to all oils: liner 1Y3555 lower than 1Y3998. There is also evidence of oil discrimination.
The transformation used for the analysis was pre determined.

LN BSOC Rated: No liner discrimination

There are two analyses for BSOC: LN transformation was used for the analyses.

8. All oils - 250 tests with Chart = Yes: Presented below, model with Lab, Oil type and Liner type; the analysis shows that there is **no evidence that the liners are different**. There is evidence of Oil type discrimination and lab differences.
9. Analysis with oil 1004-3 ONLY - because all the tests with new liners ran on oil 1004-3 - model with Lab and Liner type; the analysis shows that there is **no evidence that the liners are different**. The analysis is presented below.

The transformations applied to TGF rated and BSOC rated seem to result in a small improvement with respect to the hypothesis of constant variance. The transformations can be dropped if the working group deems appropriate.

Additional analysis: Analysis considering the several re-blends of oil 1004 equivalent, as requested by Scott Parke

Summary:

- TGF rated (no transformation): **No liner discrimination**
- WDN rated (no transformation): **Liner discrimination**
 - The conclusion based on the analysis for oil 1004-3 ONLY – Marginal significant difference between liners – changes and the difference is now clearly significant when re-blends of 1004 are considered equivalent. The difference between the liners is 11.864: liner 1Y3555 higher than 1Y3998.
- LN TLHC plus one: **Liner discrimination** liner differences for Marginal
 - The difference between the liners is -0.358; liner 1Y3555 lower than 1Y3998.
- BSOC rated (no transformation) **No liner discrimination** with or without test 18077 (test with BSOC=1.1)

Analysis considering the several re-blends of oil 1004 equivalent, as requested by Scott Parke

Summary:

- TGFrated** (no transformation): **No liner discrimination**
- WDN rated** (no transformation): **Liner discrimination**
 - The conclusion based on the analysis for oil 1004-3 ONLY – Marginal significant difference between liners – changes and the difference is now clearly significant when re-blends of 1004 are considered equivalent. The difference between the liners is 11.864: liner 1Y3555 higher than 1Y3998.
- LN TLHC plus one**: **Liner discrimination** liner differences for Marginal
 - The difference between the liners is -0.358; liner 1Y3555 lower than 1Y3998.
- BSOC rated** (no transformation) **No liner discrimination** with or without test 18077 (test with BSOC=1.1)

Detailed analyses by parameter:

TGFrated: no transformation

No liner discrimination
