Final PC-11 Matrix Status Report

T-13 Matrix Test Status

Matrix is completed and all data has been reported

Data review is currently in process by the T-13 Task Group. A face-to-face meeting is planned for February 4-5 in Richmond, Va.

COAT Matrix Status

All matrix tests have been completed and reported. Corrections on aeration results are still needed before the entire data set is complete. The Task Group has requested a rerun on Intertek's first run on oil G because of a Micro Motion ΔT issue. This test is expected to be reported this week.

The CAT Aeration Task Force will be having a face-to-face meeting on February 10-11th to review and analyze matrix data.

TMC HomePage contains a ***PC-11 & GF-6 Matrix Info*** hotLink.
