**ACTION ITEMS**

- |   |  |
|---|--|
| <b>1. Draft "B" ballot to ASTM.</b>                             | <b>Tom Franklin</b>                    |
| <b>2. Letter to API LC on backward compatibility.</b>           | <b>Jim McGeehan</b>                    |
| <b>3. Establish 75 hour "T-10" test to produce MRV samples.</b> | <b>T-10 Task Force</b>                 |
| <b>4. Issue Research Reports.</b>                               | <b>T-10, M-11 &amp; 1R Task Forces</b> |
- 

**MINUTES**

**1.0 Call to Order**

- 1.1 The meeting was called to order by Chairman Jim McGeehan at 7:31 a.m. on October 16, 2001, in the Hyatt Regency O'Hare Hotel of Rosemont, IL. There were 13 members present or represented and approximately 15 guests present. The attendance list is shown as Attachment 2.

**2.0 Agenda**

- 2.1 The published agenda (Attachment 1) was reviewed. Tom Boschert asked for time to update the group on 'elastomer' changes and Lew Williams asked for time to review backward compatibility.

**3.0 Previous Meeting Minutes**

- 3.1 The minutes of the September 26, 2001 meeting were approved as posted on the TMC website. It was noted that paragraph 8.12 had been revised to appropriately reflect the position of ExxonMobil on M-11 EGR and T-10 top ring weight loss.

**4.0 "B" Ballot Preparation**

- 4.1 In addition to those organizations listed in paragraph 11.1 of the 9/26/01 minutes, ExxonMobil, RohMax and Pennzoil-Quaker State agreed to help provide funding for Tom Franklin's work in preparing the "B" ballot of revisions to D4485 to include the CI-4 category.
- 4.2 The draft ballot will need to be at ASTM headquarters by October 22 for them to issue the ballot in time to close before the December meetings in Miami.

## 5.0 Chairman's Comments

- 5.1 Chairman McGeehan took this opportunity to express thanks and appreciation to the many task forces and their leaders who have worked so diligently to bring all the new tests and procedures to this point of acceptance.

## 6.0 Membership

- 6.1 There were no changes in membership.

## 7.0 Exit Ballot 3 Review (See Attachment 3 for ballot summary)

### 7.1 High Temperature, High Shear

- 7.11 Infineum negative on the proposed HTHS limit and would never move to affirmative, but they will abstain to allow the category to proceed.

### 7.2 Used Oil Viscometrics

- 7.21 Lubrizol negative on used oil viscometrics designation for "all" viscosity grades. They would switch to affirmative if it were limited to 15W-40 and lighter viscosity grades.
- 7.22 Valvoline negative on used oil viscometrics designation for all viscosity grades. They would switch to affirmative if the "all viscosity grades" was dropped and "each viscosity grade tested" was inserted in the exit ballot wording.
- 7.23 Dave Stehouwer moved and Lew Williams seconded inserting in the exit ballot limit wording, that the limit would apply to 0W, 5W, 10W and 15W viscosity grades. The motion passed via voice vote with none against and no abstentions. Lubrizol and Valvoline negatives now change to affirmative.

### 7.3 CAT 1R

- 7.31 Lubrizol negative on final oil consumption. Mark Rees presented slides showing oil consumption for two tests on the same oil (Attachment 4). The consumption for one test essentially decreased for the entire test. The other went down and then back up toward the end. They propose a limit of FOC / IOC = 1.4 or less. This was arrived at from the matrix data mean plus 2 standard deviations for FOC. They feel the proposed exit ballot limit is set in the noise of the test.
- 7.32 Ethyl abstain, but on FOC they propose using the last 3 or 4 oil consumption readings to establish FOC instead of just the last two readings. Tom Boschert showed a slide (Attachment 5) with matrix data which they feel reinforces Lubrizol's position. Tom also asked for clarification on how multiple tests are handled with tiered limits. The arithmetic average for each pass / fail parameter would be compared to the appropriate tiered limit.
- 7.33 Pennzoil-Quaker State feels that oils that start with low oil consumption should not be penalized, which a ratio would do.
- 7.34 After some discussion, CAT / EMA agreed a delta of 1.8 g/h for final oil consumption would be acceptable. So, Lew Williams moved that  $FOC = IOC + 1.8 \text{ g/h}$ . Dwayne Tharp seconded the motion which passed via voice vote with none against and no abstentions. This cleared the exit ballot negatives.

#### 7.4 Mack T-10

- 7.41 Infineum negative on the delta 250-300 lead limit of 10. They feel it should be 15.
- 7.42 Jim Rutherford presented a "merit" system proposal for the T-10, which would add some flexibility to coping with five pass / fail parameters (Attachment 6).
- 7.43 John Zalar presented updated T-10 (and other) tiered limits (Attachment 7).
- 7.44 Greg Shank made a presentation on the merit system (Attachment 8) and then moved acceptance of the proposed "Mack T-10 Merit System" to evaluate oils against the API CI-4 performance category. A minimum merit total of 1000 would be required. Bill Kleiser seconded the motion. Lubrizol expressed the opinion that they feel the proposed system is more restrictive on multiple tests than the proposed tiered limits. The motion passed with 12 for, 0 against and 1 abstain. The Valvoline exit ballot abstain and the Infineum negative change to affirmative with adoption of this merit system.

#### 7.5 Cummins M-11 EGR

- 7.51 Ethyl expressed concern about test filter variability.

- 7.52 Dave Stehouwer reported on available test filter data (Attachment 9) and indicated tests were still underway. Dust capacity and pleat count have yet to be determined, but pressure drop variability does not seem to be as large as anticipated.
- 7.53 The research report is nearly complete, but it probably will not issue in time to obtain a number for this ballot.

#### 7.6 Elastomer Compatibility

- 7.61 Tom Boschert reported on the Elastomer Surveillance Panel activities (Attachment 10) and noted that since they had formed a surveillance panel, they would bring the procedure to standard under D02 instead of D11.
- 7.62 Tom Boschert moved and Lew Williams seconded that the proposed new elastomer limits, which were circulated, be adopted for CI-4. The motion passed via voice vote with none against and no abstentions.
- 7.63 Tom Boschert moved and Pat Fetterman seconded that the proposed statistical method for the elastomer test be accepted as circulated. The motion passed via voice vote with none against and no abstentions.

#### 7.7 CAT 1K / 1N

- 7.71 Dwayne Tharp reported that CAT would prefer the 1N test as the primary aluminum piston deposit test in the CI-4 category, with the 1K as an acceptable alternative, but for a limited period of time. Infineum objected strongly to this change and indicated they would vote negative if the ballot proceeded with the change. Dwayne agreed they could stay with the exit ballot wording.

#### 7.8 Sequence III-F Oxidation

- 7.81 Oronite have concerns that insufficient III-F hardware will soon create an availability problem for this test. Assurances were given by GM that hardware availability would not be a problem.

### 8.0 Backward Compatibility

- 8.0 Mark Rees reviewed the tabled proposal on backward compatibility from the last meeting (Attachment 11). During the discussion, Tom Boschert proposed adopting the current wording in D4485 (X2.8.3), by changing CH-4 oils to CI-4 oils and inserting CH-4 between API and CG-4. Not quite sure what happened to the original motion, but Boschert's proposal passed via voice vote with none against and no abstentions. There is still concern that should be addressed, about the permissibility of using

passes in CI-4 tests to allow claims of CH-4 quality, until CI-4 can be licensed.

- 8.1 Jim McGeehan is to send a letter to the API Lubes Committee, registering the above action, in time for their Nov. 6<sup>th</sup> meeting.

9.0 Next Meeting

- 9.1 The next meeting of the HDEOCP is now scheduled for December 4, 2001, at the Fontainbleau Hotel in Miami.

10.0 Adjournment

- 10.1 The meeting was adjourned at 11:03 a.m. on October 16, 2001.

# Caterpillar 1R Oil Consumption

## Note: Same Oil Run Twice!

1R	Test A	Test B
WDR	282.4	340
TGC	20.25	26.5
TLC	13.75	20.25
IOC	6.7	6.2
FOC	5.4	7.8
Delta OC	-1.3	1.6
Ratio FOC/IOC	0.806	1.249

# Caterpillar 1R Oil Consumption

# Caterpillar 1R Oil Consumption

- Current oil consumption “delta” proposal results in ratios that fall within the variability of the test
  - Least mean square mean of matrix data = 1.09
  - Root mean square error = 0.1567
- This will cause oils with good volatility to fail
- Lubrizol offers the proposal that:-

Oil Consumption limit at 2 sigma of the matrix data,  
EOT/IOC ratio = 1.4

Proposed Mack T10 Merit Rating System  
presented to  
Heavy Duty Engine Oil Classification Panel

# Participants

## Subgroup of the Mack T10 Task Force

- Mack
- ExxonMobil
- Infineum
- Lubrizol
- Ethyl
- Oronite

# Merit Rating System Terms Applied to Each Criterion

- Anchors -- based on EMA one test limit
- Maximums -- limit of acceptable performance
- Minimums -- best achievable result
- Weights -- relative contribution to total merit

# Proposed Merit Rating System

- A result at or below the anchors for all five criteria would pass the test.
- If any of the five criteria results is above the maximum, the test fails.
- If results are below the maximums for all five criteria but one or more results is above the anchors, a mathematical system determines whether marginal numbers above the anchors are compensated by better than anchor results on other criteria.

# Parameters

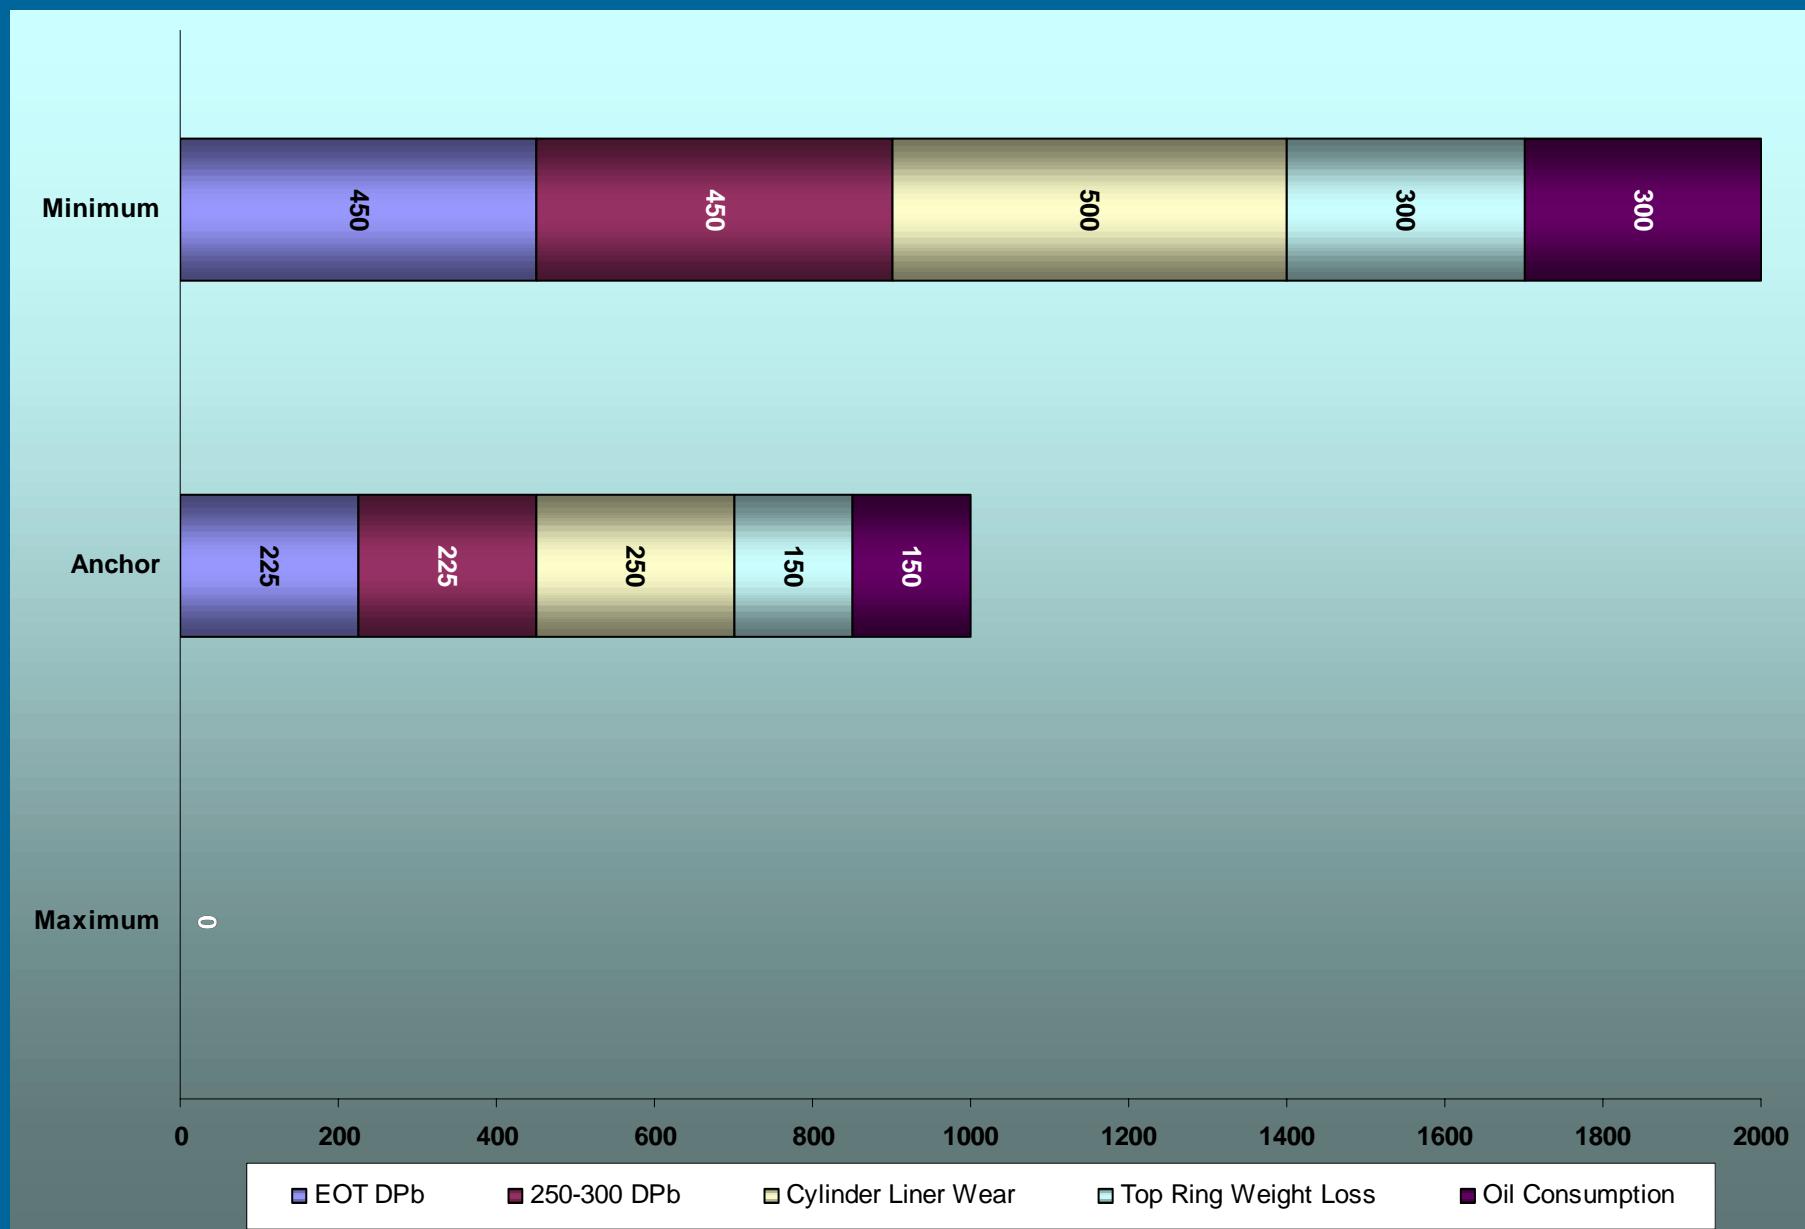

Criterion	EOT Delta Pb	250-300 Hour Delta PB	Cylinder Liner Wear	Top Ring Weight Loss	Oil Consumption
Weight	225	225	250	150	150
Maximum	35	12	32.0	158	65.0
Anchor	30	10	30	140	57
Minimum	5	0	12	50	25

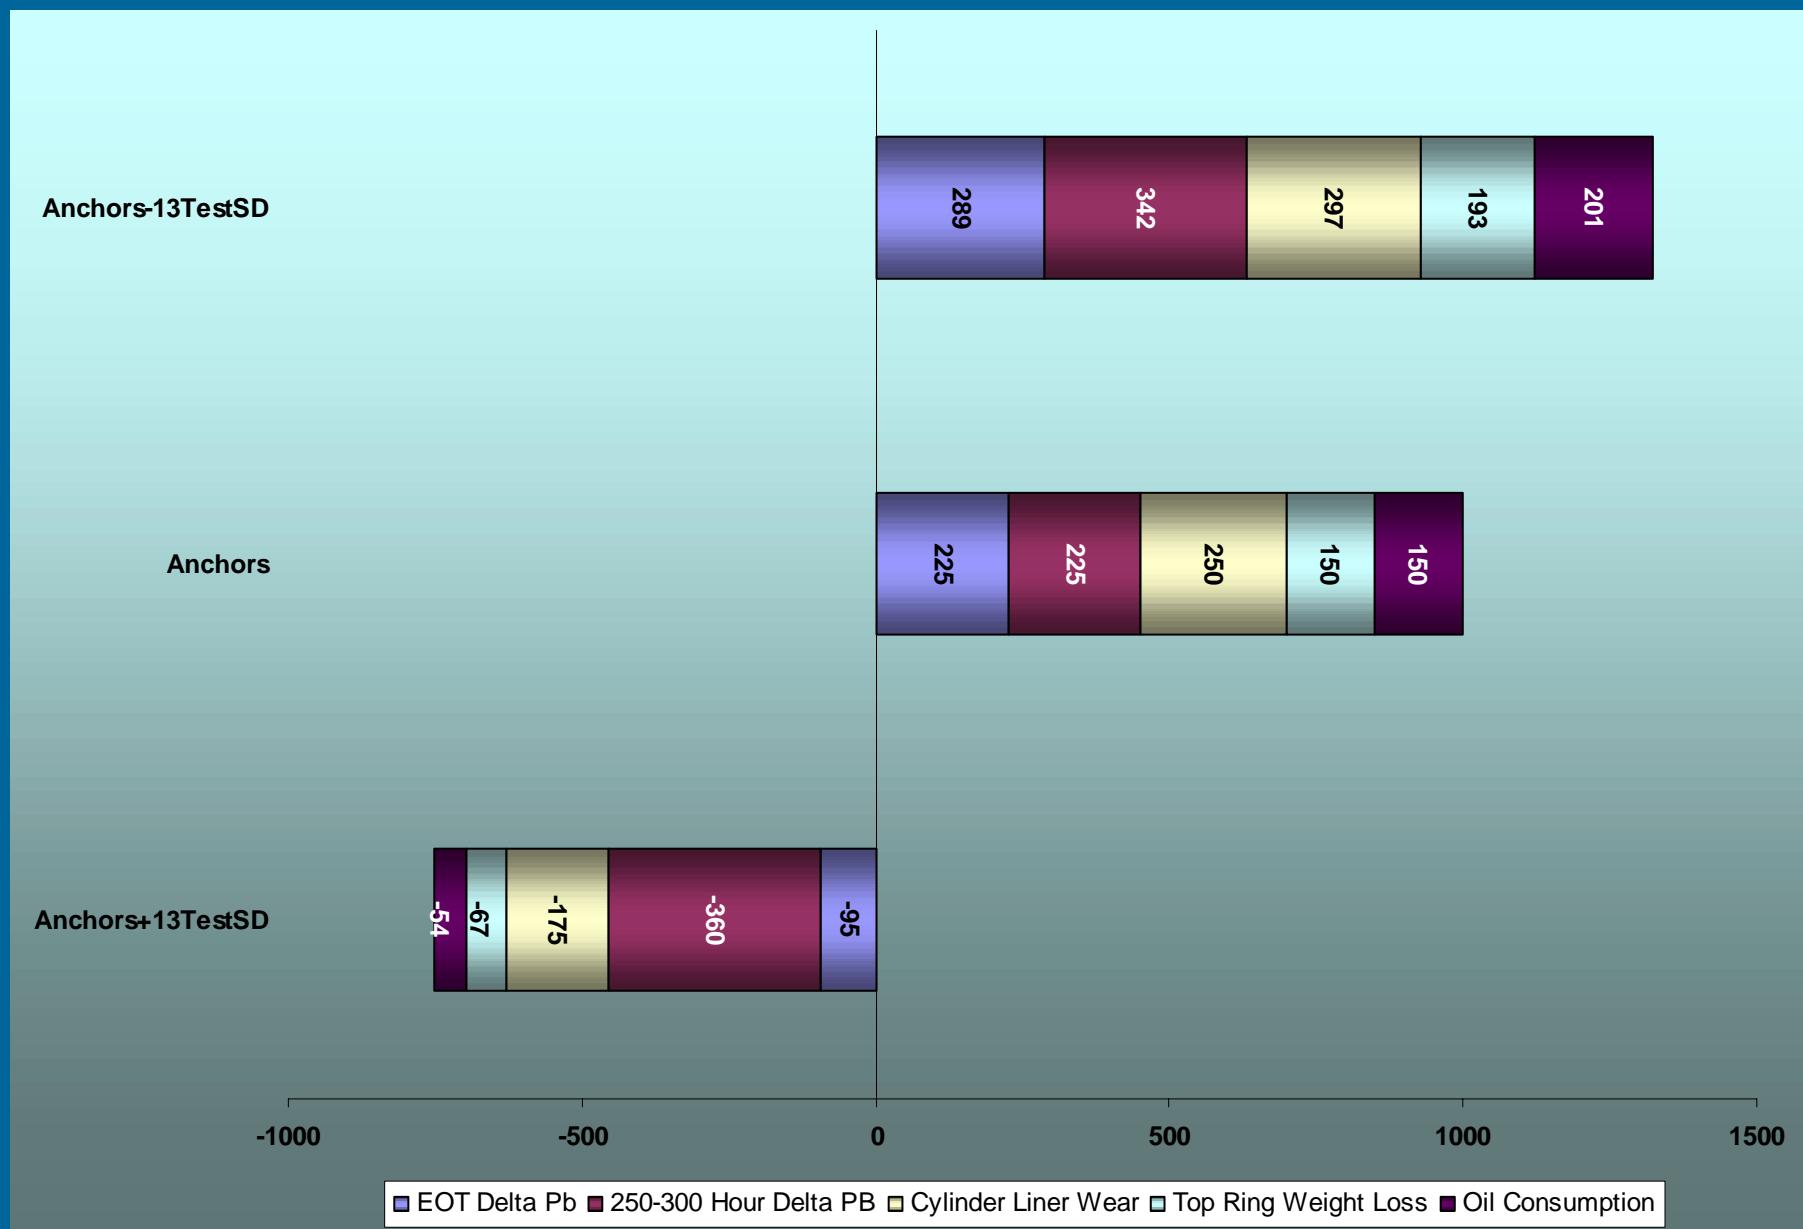

# Multiple Test Acceptance Procedure

- Multiple test evaluation would consist of averaging the five individual criteria across multiple tests. The Mack T10 Merit Rating System would be applied to the averages for the criteria.

# Examples Using Hypothetical Test Results

		EOT Delta Pb	250-300 Hour Delta PB	Cylinder Liner Wear	Top Ring Weight Loss	Oil Consumption	Calculated Merit	Final Merit
On the border		30	10	30.0	140	57.0	1000	<b>1000</b>

## Benefits of a Merit System

- More cost effective testing
- Consistent with reducing the time between ASTM acceptance and first date of API licensing
- Allows test developer to weight individual parameters
- Adds an incentive for improved performance
- Flexibility in setting up system
- Easier to gain consensus on limits

- Testing is more cost effective as some accommodation has been incorporated into the merit system for the precision of the test. This accommodation for precision is done on a parameter by parameter basis. A borderline fail under the fixed limit system, could be acceptable under a merit system and thus eliminate additional testing.
- To the extent that repeat testing is eliminated, this will help speed up approval programs and reduce stand availability constraints.
- Key performance parameters can be heavily weighted vs. less critical, but nonetheless important parameters.
- To enable a passing merit to be achieved, formulators have an incentive to improve performance (merits) in key performance areas to ensure an overall pass if another parameter is a borderline fail.
- The system developers are not looking at simply “limits” they can set maximums, minimums, weighting factors etc.
- The added flexibility of a merit system should help in gaining consensus

## **Motion**

To accept the proposed “Mack T-10 Merit System<sup>1</sup>” to evaluate oils against the API CI-4 performance category. A minimum merit of 1000 would be required.

---

# M11 EGR Test

Presentation to  
HDEOCP  
October 16, 2001  
David M Stehouwer

# Evaluation of Beaded Filters

---

- Concern over number and spacing of pleats
- Questionable used filters returned to FG
- Statistical sampling (36) of 550 filter batch  
returned to FG
- Perform flow vs. restriction
- Examine extremes for pleat count and spacing
- Perform dust capacity testing on extremes
- Refer to O&H Panel

# Analysis of Returned Filters by Fleetguard

---

Oil	Filter	# Pleats	Area Cm2	Gm/100 cm2	Total Contaminant Gm
E	A	61	5243	2.00	105
E	B	55	4727	1.65	80
E	MCD1 Even			1.6971	
E	MCD1 Bunched			1.3855	
E	MCD1 Average	59	5071	1.5413	78
E	MCD7 Even			0.9663	
E	MCD7 Bunched			0.8132	
E	MCD2 Average	56	4813	0.88975	43
Test	Even			4.7729	
Test	Bunched			4.4734	
Test	Average	60	5157	4.6232	238

David M Stehouwer, Cummins Inc.

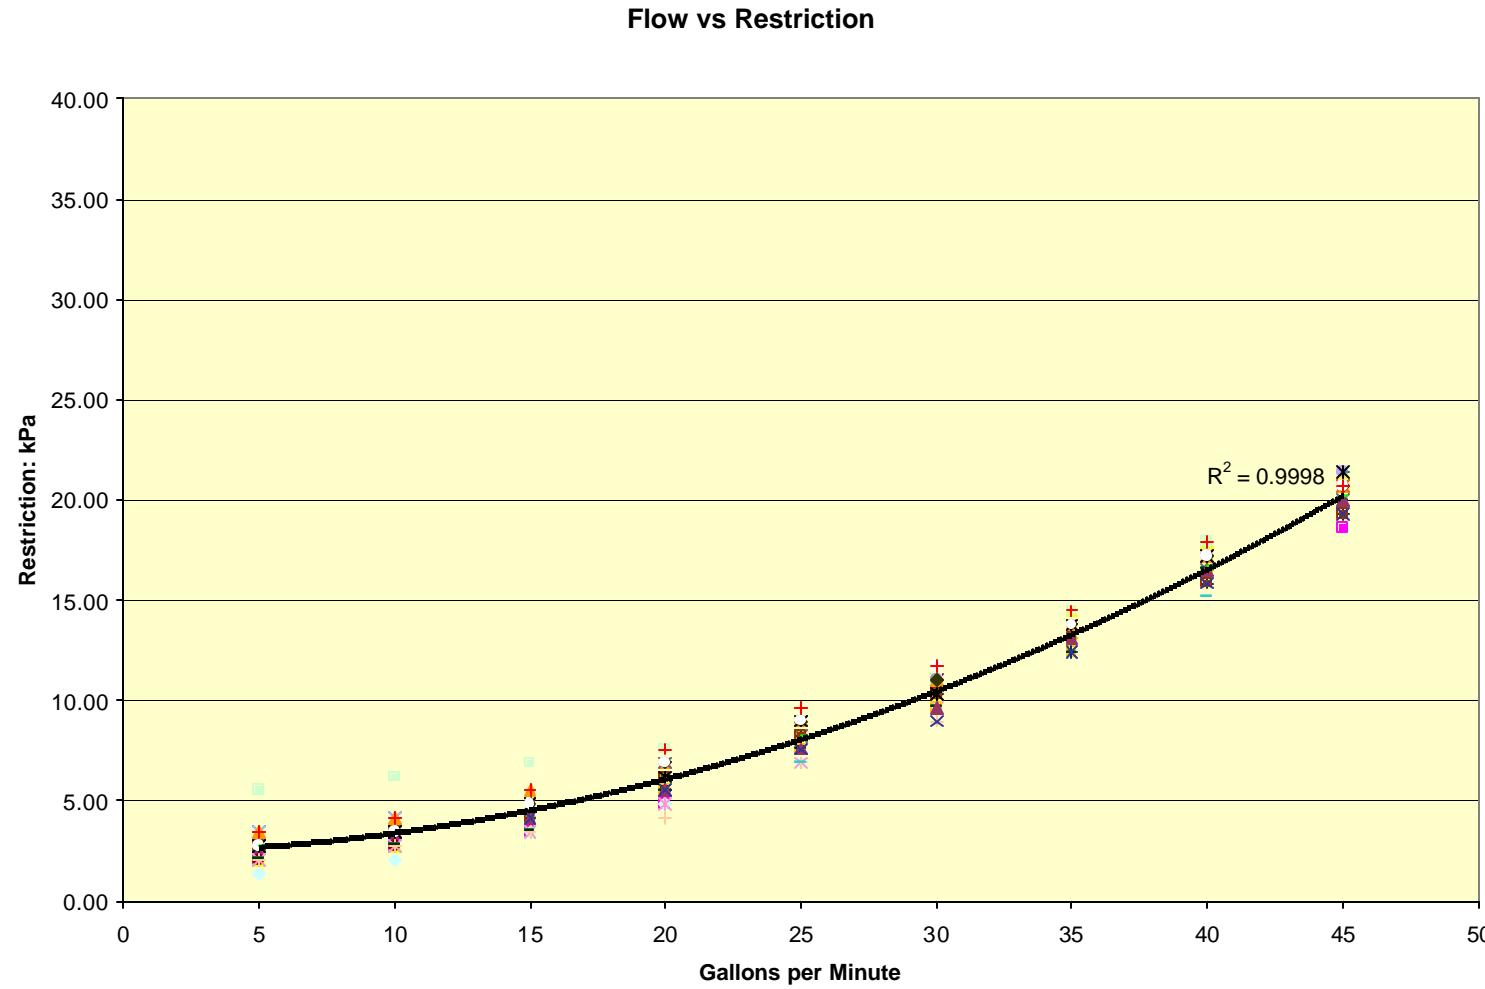

# Observations from Filter Analysis

---

- Pleat count is from 55 to 61 with a target of 55 min.
- Bunched pleats do remove slightly less material, but...
- Bunched pleats can remove a lot of deposit with less variation than expected
- The relationship with sludge ratings and filter deposits suggests that when an oil exceeds its capacity to hold sludge, it comes out all over the engine... filter, pan, valve covers etc.

# Flow vs. Restriction for Reference Filters

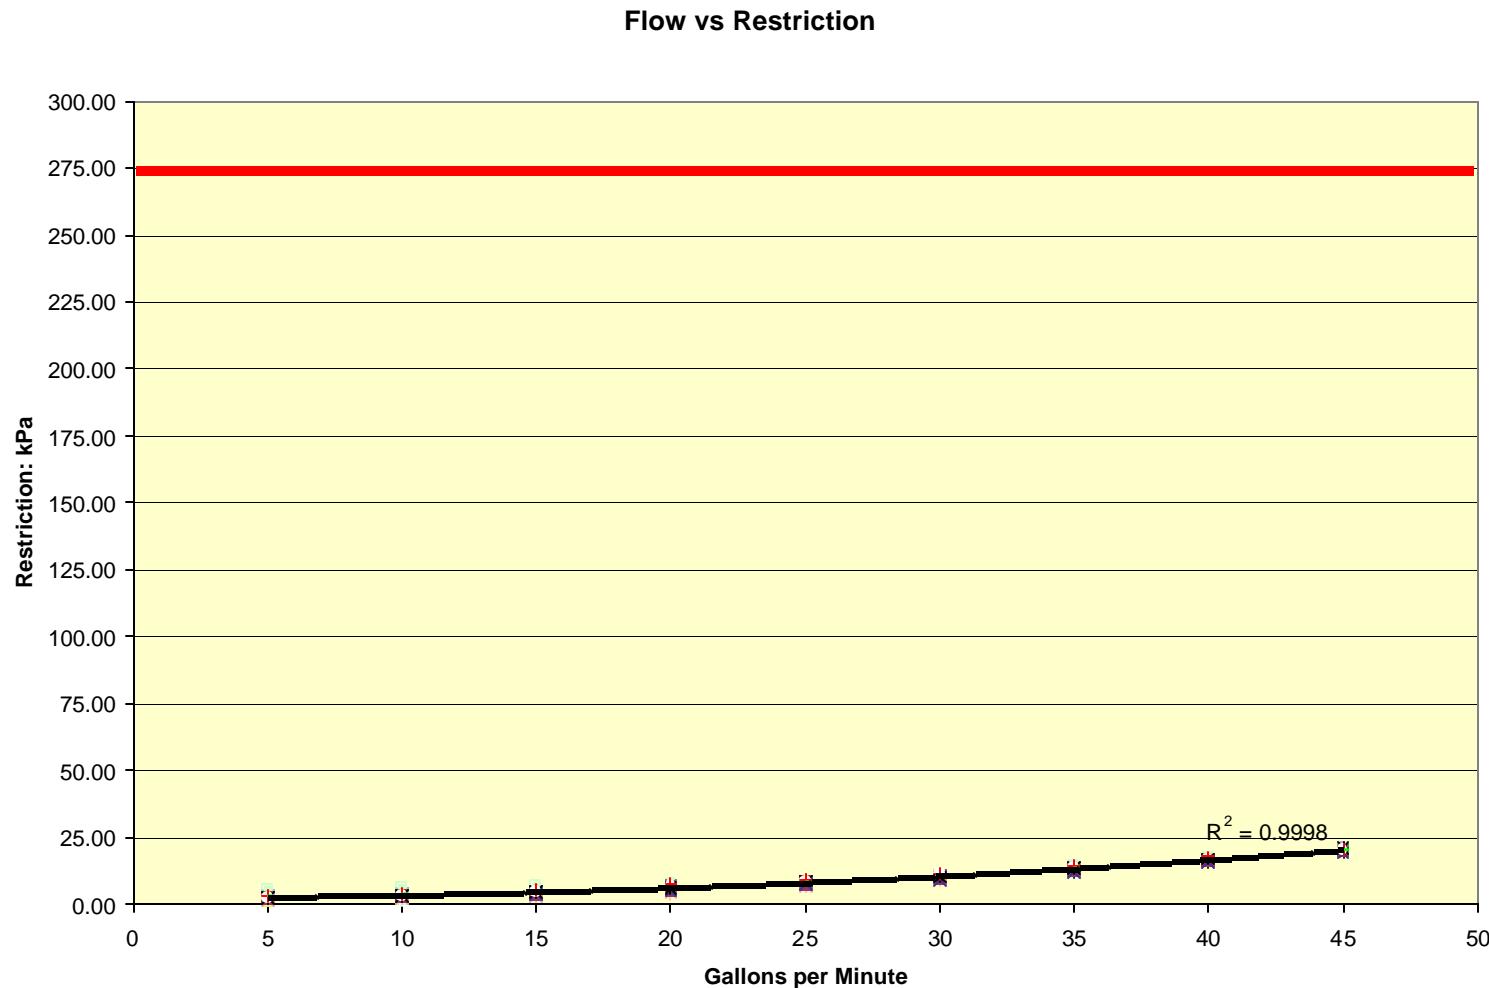

## ○ Analysis of 34 filters reference filters

David M Stehouwer, Cummins Inc.

# Flow vs. Restriction for Reference Filters

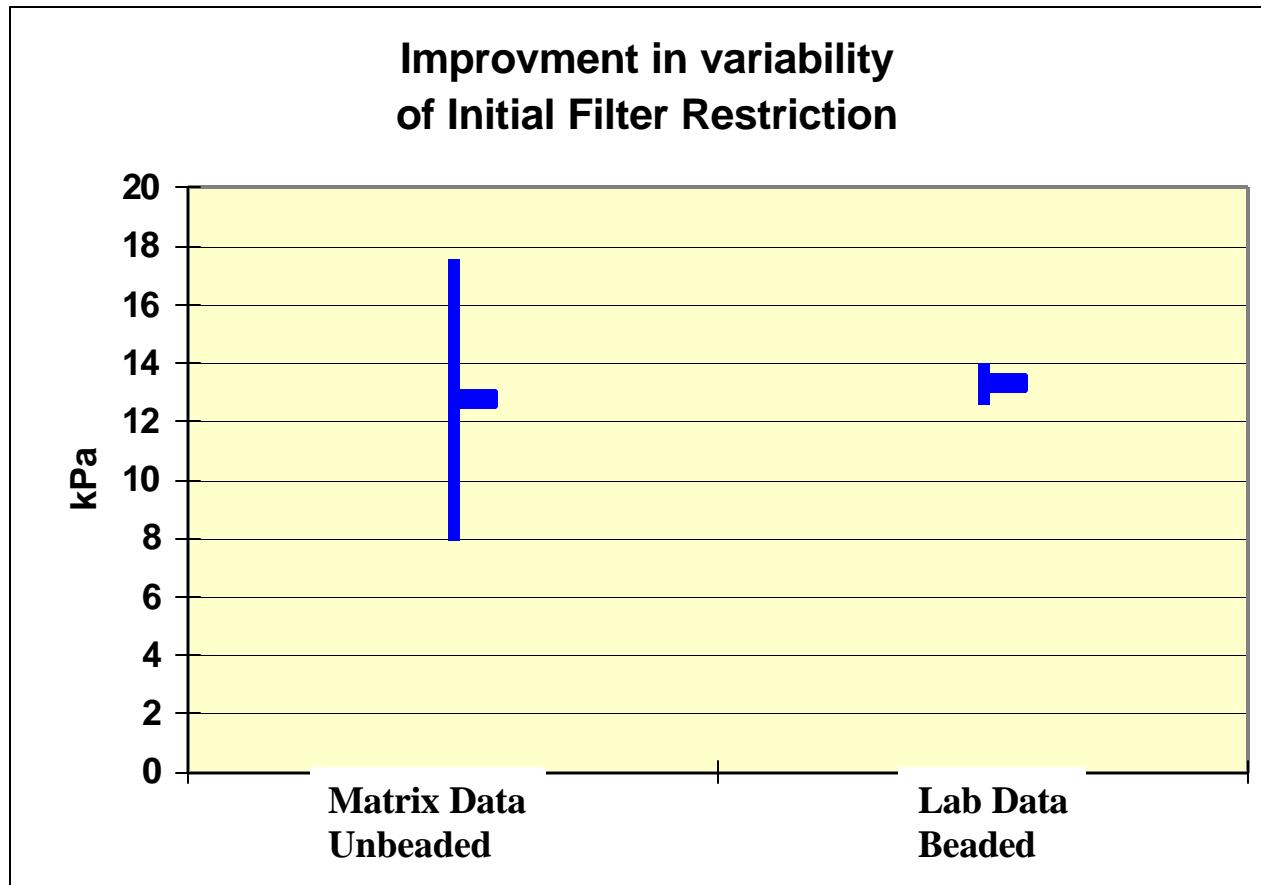

## ○ Showing M11 EGR Filter Plugging Limit

David M Stehouwer, Cummins Inc.

# Improvement in Consistency

- Comparison of 1st 14 matrix runs using unbanded filters with lab result on beaded filters. Mean +/- 1 sd.

# CI-4 Elastomer Surveillance Panel

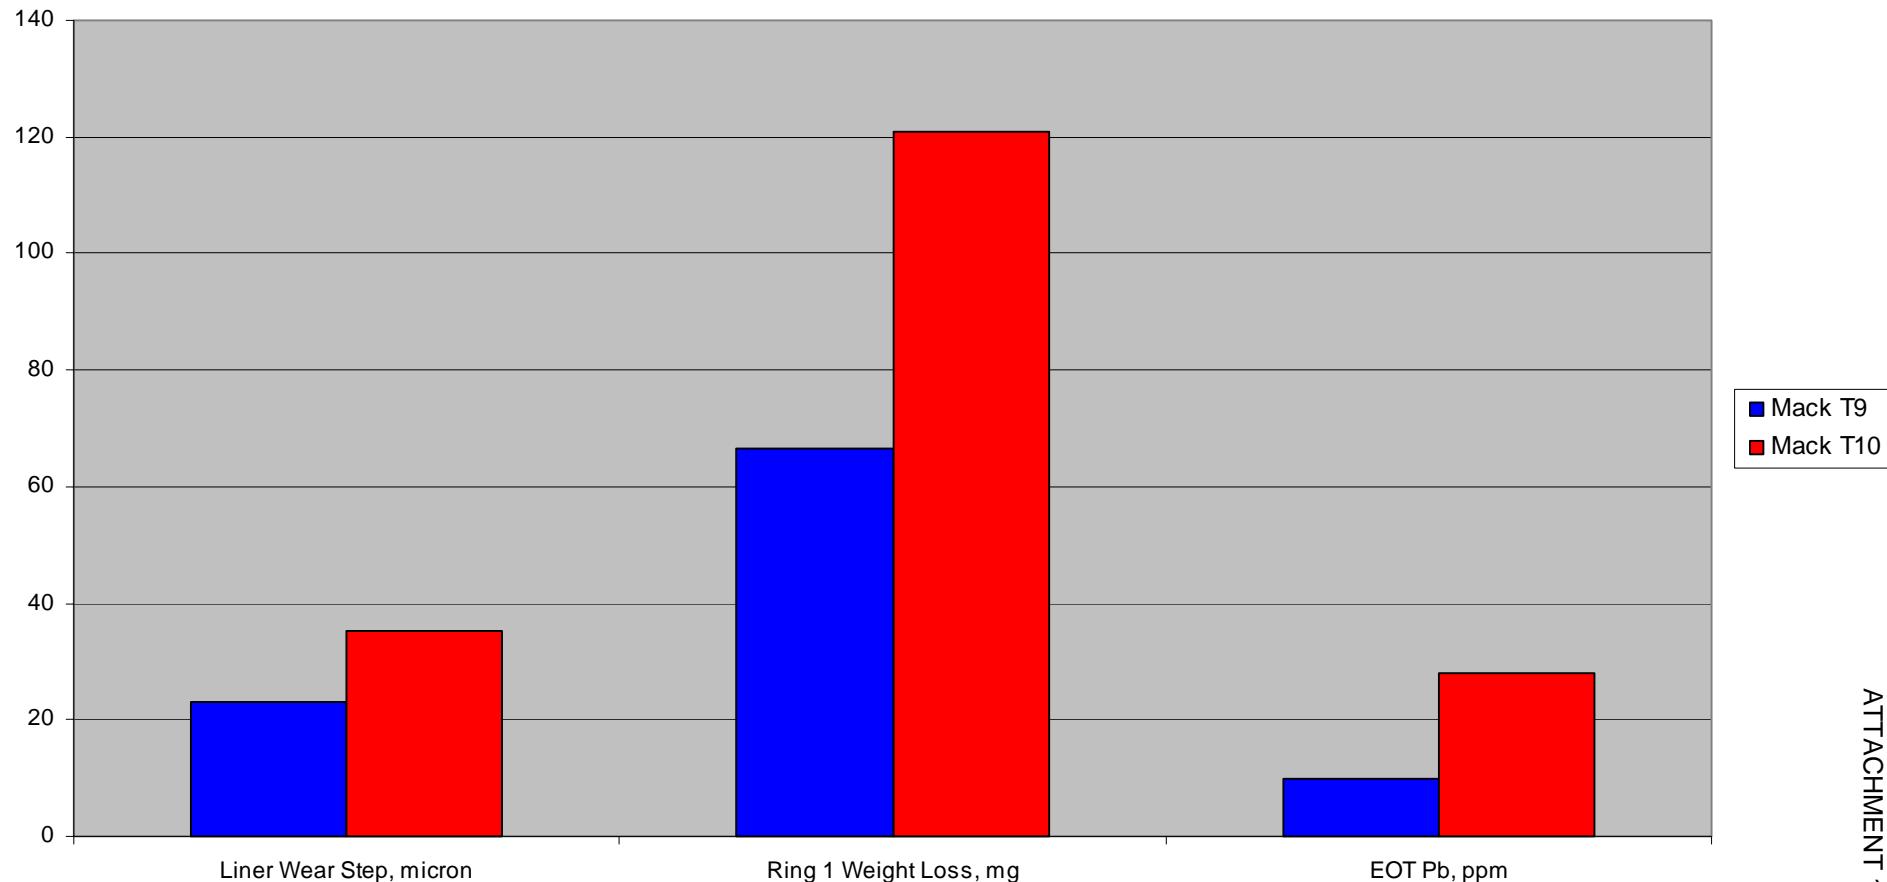

## Actions from Oct. 11 Mtg.

- Recommend Changes to proposed limits
- Adopted statistical method for determining if a candidate oil is different than the ref.oil or limit
- Will bring procedure to standard within D02 not D11 - some rewording needed
- Defined a system for listing ref. Oil data on TMC website
- Preliminary ideas on BOI/VGRA - will request data for review to present to API BOI/VGRA TF

# CI-4 Backward Compatibility

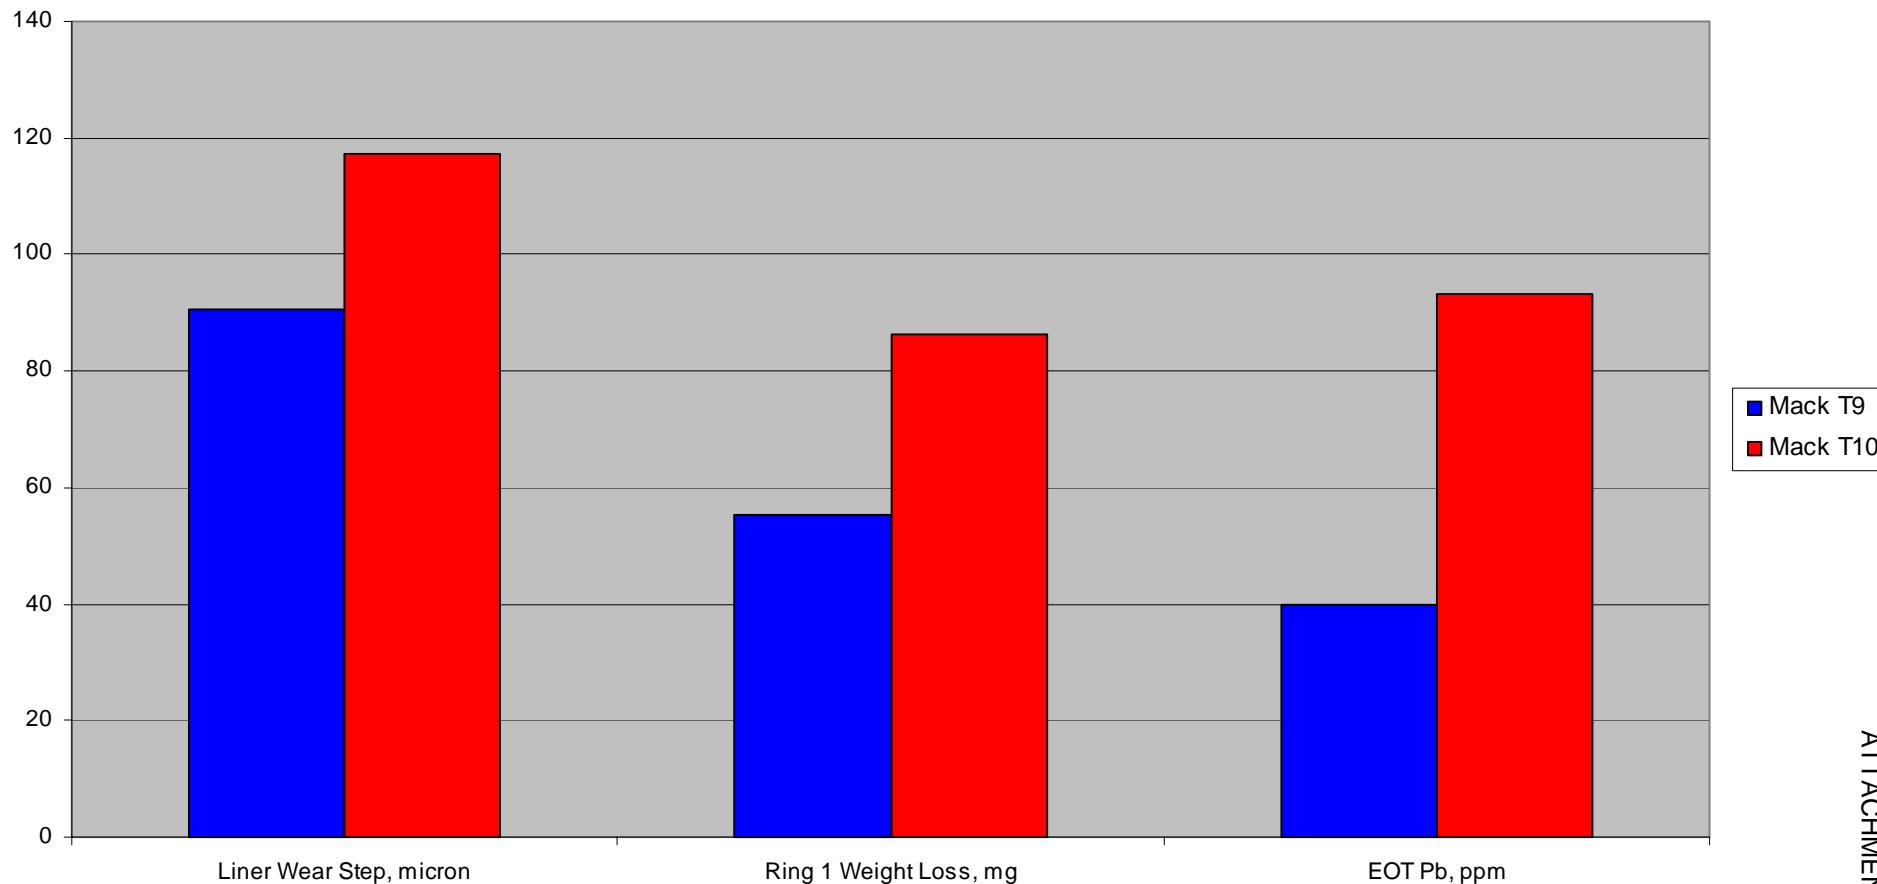

# EGR Backward Compatibility

Mack T9 / T10 Comparison

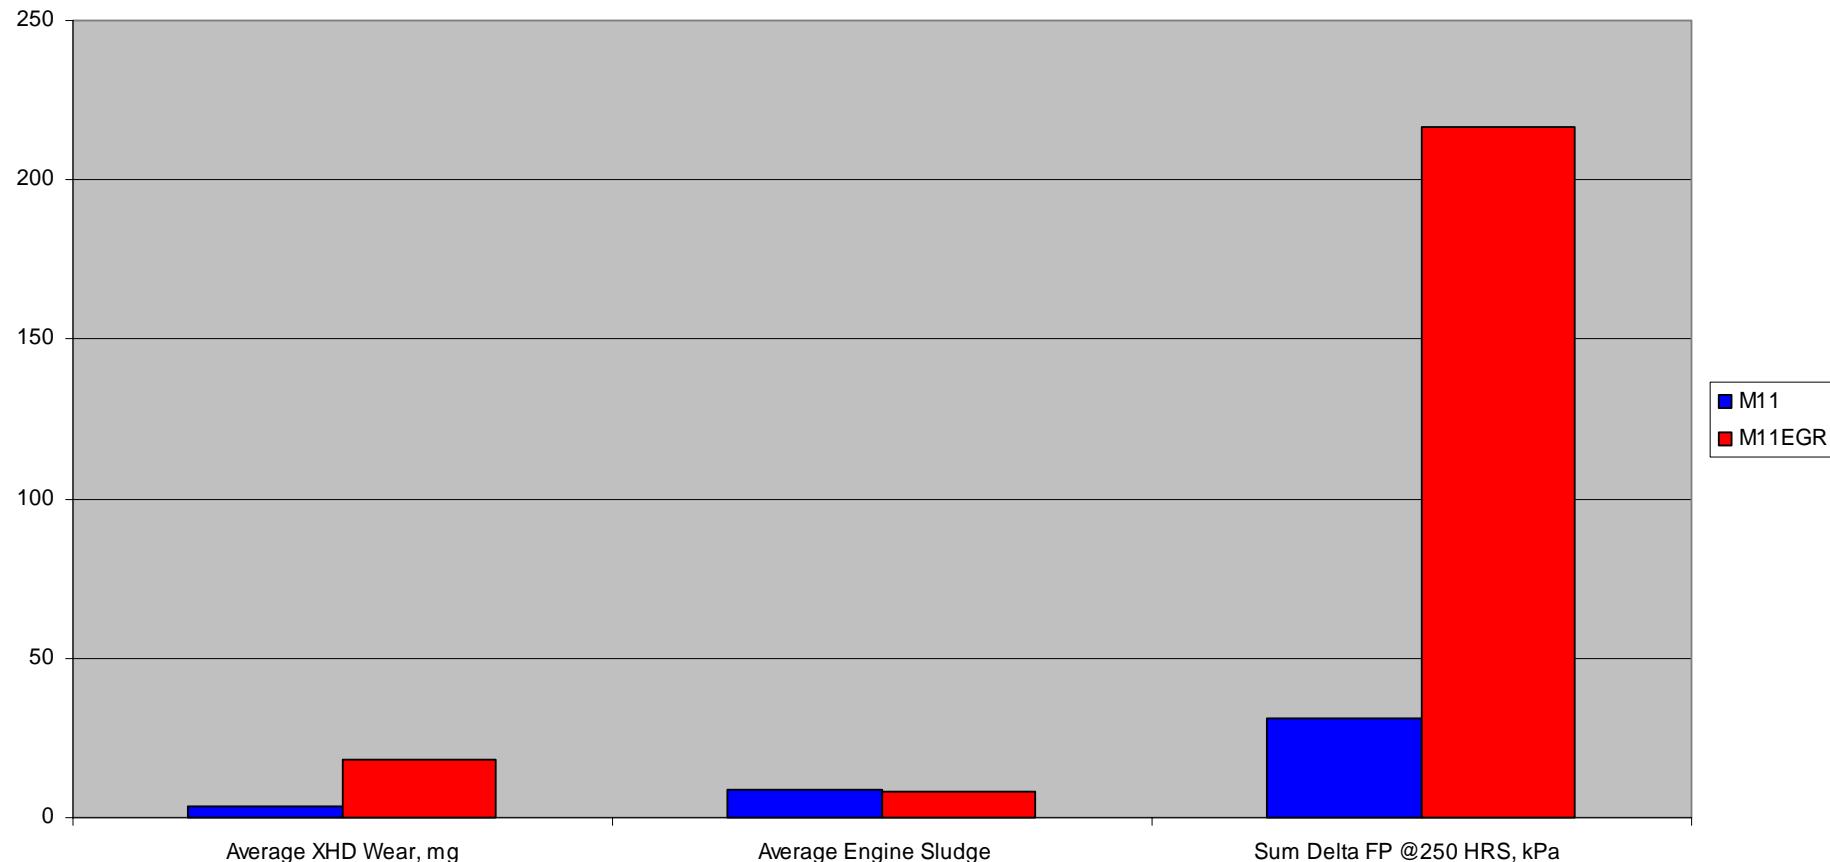

# EGR Backward Compatibility

Mack T9 / T10 Results as Percentage of Limits

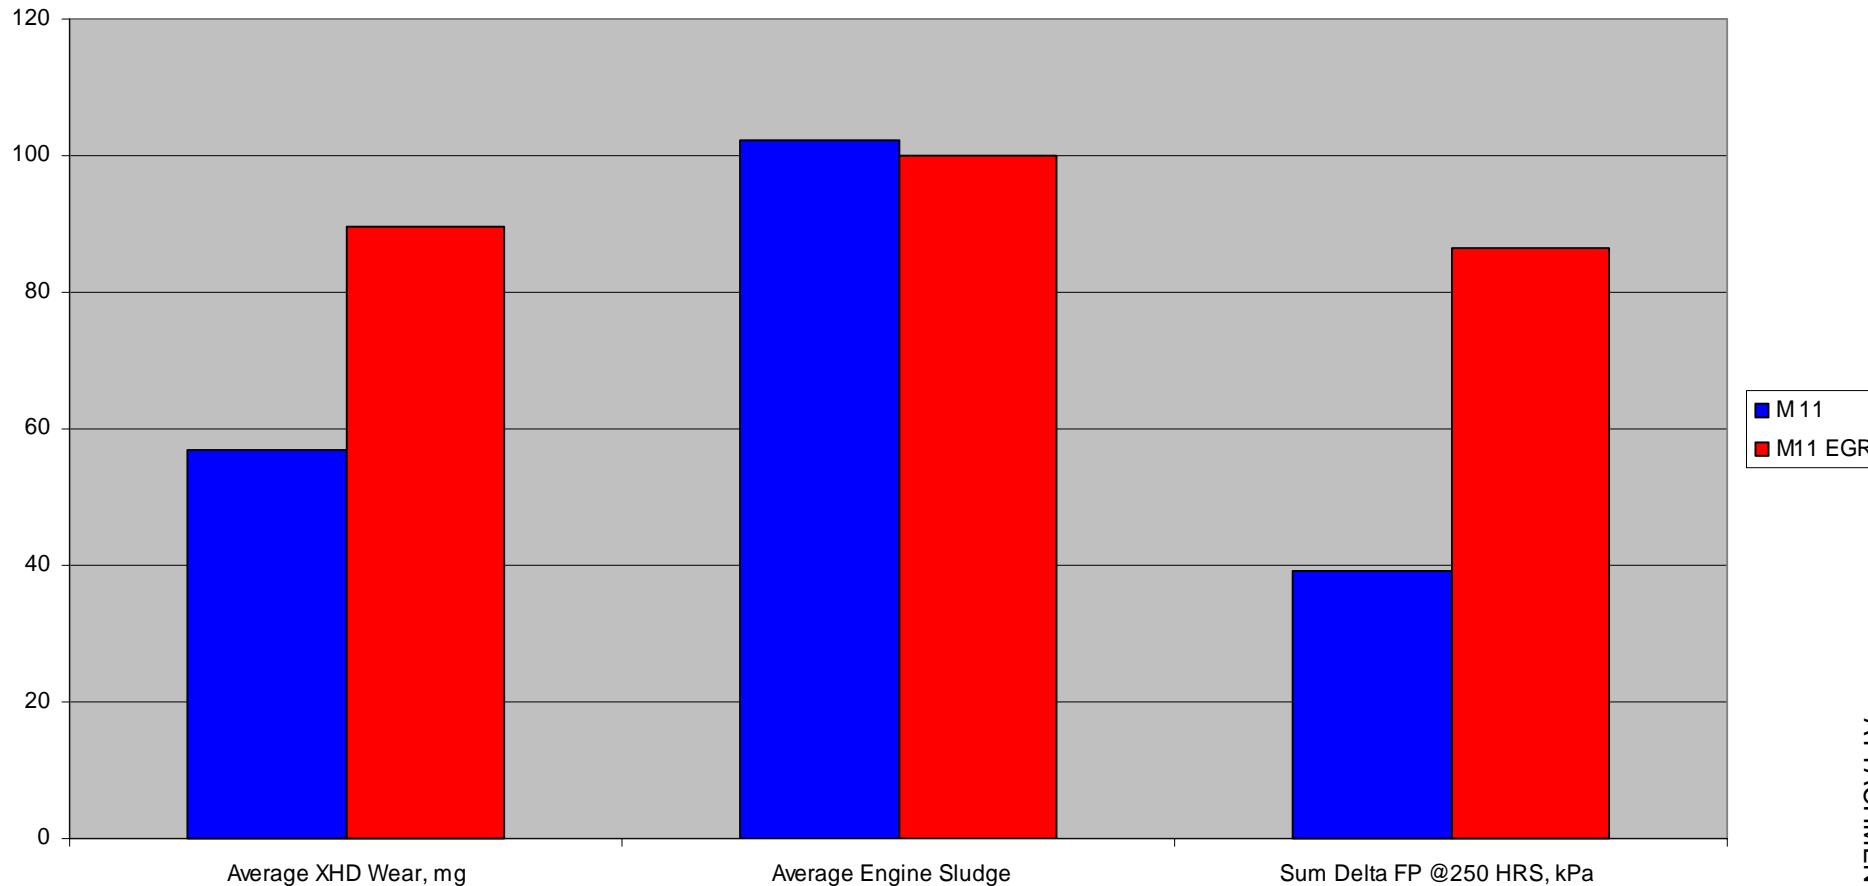

# EGR Backward Compatibility

Cummins M11 / M11EGR Comparision

# EGR Backward Compatibility

Cummins M11 / M11EGR Results as Percentage of Limits

# EGR Backward Compatibility

- Performance observed in the new EGR tests is more severe than their non-EGR predecessors
- Lubrizol offers the motion that:-

“The tests and limits as approved by ASTM B used to qualify oils for API CI-4 may be used to qualify oils for API CH-4”
