

MEMORANDUM: 04-051

DATE: June 2, 2004

TO: Sequence III Surveillance Panel

FROM: Michael T. Kasimirsky

SUBJECT: Sequence IIIG/IIIGA Reference Oil 438 Test Target Update

On May 26, 2004, the Sequence III Surveillance Panel approved a motion to revise the test targets on 438 based upon all the data available to date in the LTMS. As part of the motion, the panel also approved a plan to update the targets when 30 and 35 data points on this oil become available. These revised targets, based upon the 25 data points available at this time, are shown in the following table:

Parameter	Mean	Standard Deviation
PVIS	4.5761	0.1877
WPD	3.20	0.35
ACLW	2.8799	0.1864
MRV	9.8405	0.16998

Any applicable severity adjustments were applied to the data prior to target generation. The data used to generate these targets is shown in Tables 1 & 2. Table 1 shows unadjusted data. Table 2 shows severity-adjusted data, with the adjusted parameters shown in red. The above test targets; as well as the severity-adjusted data used to generate them; the raw test targets, the initial test targets, and the preliminary targets from the matrix (which were never used in the IIIG LTMS) for reference oil 438 are shown in the following figures. Figure 1 shows the PVIS data in transformed units. Figure 2 shows the PVIS data in original units. Figure 3 shows the WPD data in original units. Figures 4 and 5 show the ACLW data in transformed and original units, respectively. Figures 6 and 7 show the Sequence IIIGA MRV data in transformed and original units, respectively.
