

MEMORANDUM: 04-055

DATE: June 10, 2004

TO: Sequence III Surveillance Panel

FROM: Michael T. Kasimirsky

SUBJECT: Sequence IIIF Reference Oil 1008-1 Updated Test Targets

The TMC has received 20 data points on reference oil 1008-1 and as such has sufficient data to update the test targets at this time. The updated test targets, based on the 20 available data points on this reference oil, are shown below:

Updated Reference Oil 1008-1 Test Targets		
Parameter	Mean	Standard Deviation
PVIS	0.0930792	0.0059248
APV	9.77	0.103
WPD	4.57	0.699
PV60	4.33528	0.118673

Any applicable severity adjustments were applied to the data prior to target generation. These targets will be updated when the TMC has 30 data points available on this reference oil. Below are two tables showing the individual reference oil test results used in generation of these targets. Table 1 is the raw, unadjusted data as reported to the TMC and Table 2 is the severity-adjusted data used to calculate the test targets, with severity-adjusted parameters shown in red.

The new test targets, along with targets based on the raw data, the final test targets on reference oil 1008, the initial test targets on reference oil 1008-1, and the individual data points are displayed graphically in the six attached plots. Figures 1 and 2 show Percent Viscosity Increase at 80 hours, in transformed and reported units, respectively. Figure 3 shows Weighted Piston Deposits in reported units and Figure 4 shows Average Piston Varnish in reported units. Figures 5 and 6 show Percent Viscosity Increase at 60 hours (the IIIF-HD parameter) in transformed and reported units, respectively.

These new targets are effective for all tests completed on or after June 21, 2004.
