REPORT PACKET REVISION NOTICE: LSPI-20170405

VERSION: 20170405

EFFECTIVE DATE: April 21, 2017

DATE: April 5, 2017

TO: LSPI Task Force

FROM: Richard E. Grundza

Recently, the Task Force made a number of changes to include transformations and severity adjustments in anticipation of calibration and registered testing. Also, during beta testing a number of errors were noted in data types for stand run and engine run and in corrected pre-ignition and final number of pre-ignition fields. In addition, it was noted that there may be circumstances where engine life exceeds 1000 hours for ENGINEHR and HEADHRS. These fields have been increased to address this potential. Version 20170405, which addresses these changes, is available from the TMC Website and is effective April 21, 2017. This shortened implementation date was requested by the LSPI Task Force to have the forms and data dictionary in place when registered testing is expected to begin.
