

MEMORANDUM: 04-094
 DATE: November 3, 2004
 TO: Gordon R. Farnsworth, Chairman, Sequence VG Surveillance Panel
 FROM: Richard Grundza 
 SUBJECT: Sequence VG Reference Oil Tests Statistics, Reference Oils 1006-2, 1009 and 925-3

The following are the statistics for Sequence VG reference oil 1006-2, based on thirty test results. These targets are effective for reference oil tests completing on or after November 3, 2004.

Parameter	Mean	Standard Deviation
AES	8.65	0.41
RAC	9.40	0.15
AEV	9.24	0.11
APV	8.52	0.14
OSCR	0.896	0.579
HSR	None Allowed	

Figures 1 through 5 plot the results by laboratory and the Shewhart acceptance ranges for AES, RAC, AEV, APV and OSCR, respectively. Hot stuck ring data was not plotted since no hot stuck rings are allowed and no tests exhibited hot ring sticking. Please note that laboratory results in Figures 1 through 5 have not been severity adjusted. Figure 6 summarizes the reported results, uncorrected, while Figure 7 tabulates the severity adjusted results, used to calculate the targets. All results are in reported units except Oil Screen Clogging (OSCR), which has been transformed using $\ln(1+\text{result})$ transformation.

The following are the statistics for Sequence VG reference oil 1009, based on thirty test results. These targets are effective for reference oil tests completing on or after November 3, 2004.

Parameter	Mean	Standard Deviation
AES	7.94	0.52
RAC	9.29	0.18
AEV	8.99	0.11
APV	7.79	0.28
OSCR	2.200	1.038
HSR	None Allowed	

Figures 8 through 12 plot the results by laboratory and the Shewhart acceptance ranges for AES, RAC, AEV, APV and OSCR, respectively. Hot stuck ring data was not plotted since no hot stuck rings are allowed and no tests exhibited hot ring sticking. Please note that laboratory results in Figures 8

through 12 have not been severity adjusted. Figure 13 summarizes the reported results, uncorrected, while Figure 14 tabulates the severity adjusted results, used to calculate the targets. All results are in reported units except Oil Screen Clogging (OSCR), which has been transformed using $\ln(1+\text{result})$ transformation.

The following are the statistics for Sequence VG reference oil 925-3, based on twenty-two test results. These targets are effective for reference oil tests completing on or after November 3, 2004.

Parameter	Mean	Standard Deviation
AES	6.51	0.60
RAC	7.40	0.48
AEV	8.58	0.20
APV	7.38	0.28
OSCR	4.084	0.665
HSR	None Allowed	

Figures 15 through 19 plot the results by laboratory and the Shewhart acceptance ranges for AES, RAC, AEV, APV and OSCR, respectively. Hot stuck ring data was not plotted since no hot stuck rings are allowed and no tests exhibited hot ring sticking. Please note that laboratory results in Figures 1 through 5 have not been severity adjusted. Figure 20 summarizes the reported results, uncorrected, while Figure 21 tabulates the severity adjusted results, used to calculate the targets. All results are in reported units except Oil Screen Clogging (OSCR), which has been transformed using $\ln(1+\text{result})$ transformation.
