ASTM D02.B0.03 L-37 Surveillance Panel

Members and Guests:

Attached for your review and comment are the unconfirmed minutes of the:

- June 21, 2006 L-37 Surveillance Panel Meeting conducted at the PRI Headquarters, Apollo Room, Warrendale, PA.

Please direct any corrections or comments to my attention.

Sincerely,

A handwritten signature in black ink that reads "Donald T. Bartlett".

Donald T. Bartlett, Chairman

L-37 Surveillance Panel

Report of Meeting
L-37 Surveillance Panel
PRI Headquarters, Apollo Room
Warrendale, PA
June 21, 2006

Sign-in/Review of Membership: The meeting was called to order at 3:00 pm. The sign-in sheet is **Attachment 1.** There were no requested changes in the membership list, See **Attachment 2.**

Motion 1 ⇒ Mr. Smith, Second ⇒ Mr. Rea -Approval of Surveillance Panel meeting minutes of May 9, 2006 as corrected. The motion passed unanimously with a vote count of 6, 0, 0. (Note: corrections have been posted on the TMC website)

Meeting Agenda

The meeting agenda is included as **Attachment 3.**

Summary of Action Items

None

Summary of Motions

Motion 1 ⇒ Mr. Smith, Second ⇒ Mr. Rea -Approval of Surveillance Panel meeting minutes of May 9, 2006 as corrected.

Motion 2 ⇒ Mr. Lind, Second ⇒ Mr. Sullivan: The panel directs the TMC to issue a memorandum documenting a request that any reference test hardware be kept for 1 year from end of test date with the understanding that the parts are to be made available to the TMC for other purposes (i.e., Gear Oil rating Calibration Workshop, etc) or other defined panel requirements/needs.

Motion 3 ⇒ Mr. Sullivan, Second ⇒ Mr. Koglin: To accept the RCMS targets as presented with an effective date of 6/21/2006.

Motion 4 ⇒ Mr. Gropp, Second ⇒ Mr. Sullivan): For all distress categories, the panel requests the TMC to use this data to determine the magnitude of offset between the current and new targets and if the differences in means are statistically significant.

Summary of Meeting Discussions

- **Motion to Save Reference Tested Hardware for 1 Year - TMC request from discussion started in the L-60-1 Panel meeting to save hardware for all L-tests.**

Motion 2 ⇒ Mr. Lind, Second ⇒ Mr. Sullivan: The panel directs the TMC to issue a memorandum documenting a request that any reference test hardware be kept for 1 year from end of test date with the understanding that the parts are to be made available to the TMC for other purposes (i.e., Gear Oil rating Calibration Workshop, etc) or other defined panel requirements/needs. The motion passed unanimously with a vote count of 6, 0, 0

- **RCMS Pinion Target Updates - TMC**

The original test targets have never been updated since the Rater Calibration Monitoring System (RCMS) was implemented. The mean and standard deviation were originally set with n-sizes from 6 to 9 depending on the specific pinion number. The n-size has now increased from 15-28, again, depending on the specific pinion number. Mr. Lind summarized the data that is included as **Attachment 4**.

He pointed out that there is a large difference in wear distress with this being mostly attributed to a change in the wear definition made a couple years ago versus the wear definition in place at the beginning of the RCMS. The definition change was meant to standardize ratings.

Mr. Lind believes the raters are rating differently but more consistently since the wear rating definition was introduced. He also stated that the data shows an improvement in standard deviation. Mr. Gropp and Mr. Sullivan stated that the standard deviation for wear doesn't appear to reflect this. Mr. Lind reminded the Panel that it was a Panel decision instructing the TMC initially to use a larger k-value to widen the bands. If the panel wants the bands to be tighter, the k-value could be changed. Mr. Lind believes that the rating task force awareness discussions are making the process better.

Mr. Gropp stated that he doesn't necessarily have an issue with this. But philosophically, he believes the offset shift in the mean will create a continuing problem. In essence, the original pass/fail criterion was established long ago. Aren't we, essentially, with the adoption of this rater-offset change, changing/lowering the performance level to a lower number? He feels that the raters have changed their process and the panel should keep the initial targets at the historical level of severity or issue a correction factor. Mr. Sullivan stated that he agrees but this should be kept for a different discussion. Remember, the RCMS means and standard deviations are true reflections of the rater precision and repeatability.

Motion 3 ⇒ Mr. Sullivan, Second ⇒ Mr. Koglin: To accept the RCMS targets as presented with an effective date of 6/21/2006.

Discussion: Mr. Gropp stated that we need to take a serious look at the offset in how we are rating and should use this specific dataset to do that comparison. It was suggested that this could be a separate motion.

Motion Results: Pass

For: 6

Opposed: 0

Abstentions: 0

Motion 4 ⇒ Mr. Gropp, Second ⇒ Mr Sullivan): For all distress categories, the panel requests the TMC to use this data to determine the magnitude of offset between the current and new targets and if the differences in means are statistically significant.

Motion Results: Pass

For: 7

Opposed: 0

Abstentions: 1

➤ 2005 P4L792/V1L417 Non-Lubrited Gear Batch Consistent Rater Review

Based on a motion from the May 9, 2006 Panel meeting, an action item was for the labs to send the pinions from just the TMC 127 runs to the TMC and have the two "most consistent" RCMS raters rate them to confirm that the variability wasn't a cause of rating. The original test results and repeat ratings are included as **Attachment 5**. The repeat ratings show no significant differences between the original ratings (really most comparable) which suggests the variability was truly a source of the hardware or test operation and not the rating.

Mr. Lind again stated that he believes that the consistency is getting better with the ratings. He mentioned again that maybe we need to look at something different to determine if candidates are being affected by the observed severity in wear based on the change in the rating definition. He really believes that there is an influence by only a few raters and any industry correction factor wouldn't be applicable because it is not linear, rather, only around the 6, 7, and 8 distress level. He doesn't know how to correct this issue.

➤ 2006 Lubrited Gear Batch Update – The chairman reported that Dana has received all of the purchase orders and will soon be purchasing the heat of steel. See **Attachment 6**. It would appear that an October 2005 timeframe for production, assembly, and receipt of hardware is very likely. A 44-test matrix has been defined.

With a motion and second by Mr. Sullivan, Mr. Koglin, the meeting was adjourned at 3:57 pm.

Respectfully submitted,

Donald T. Bartlett

L-37 Surveillance Panel Chairman
