

MEMORANDUM: 07-061

DATE: October 17, 2007

TO: Don Bell, Chairman, OSCT Surveillance Panel

FROM: Donald Lind

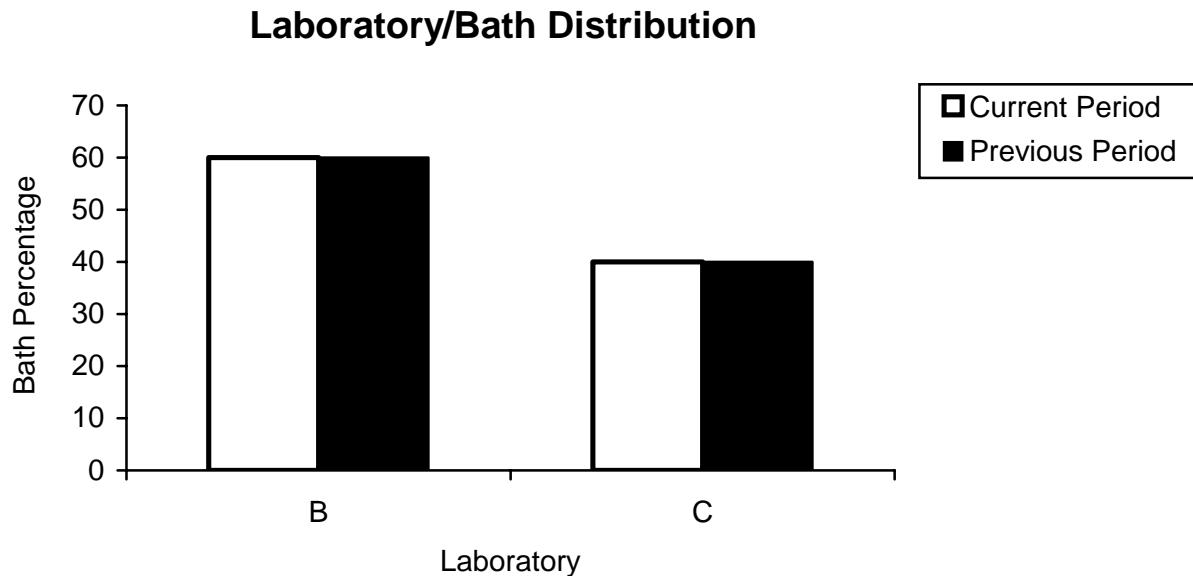

SUBJECT: OSCT Reference Test Status from April 1, 2007 through September 30, 2007

A total of 50 OSCT reference oil results from two laboratories were reported during the period April 1, 2007 through September 30, 2007.

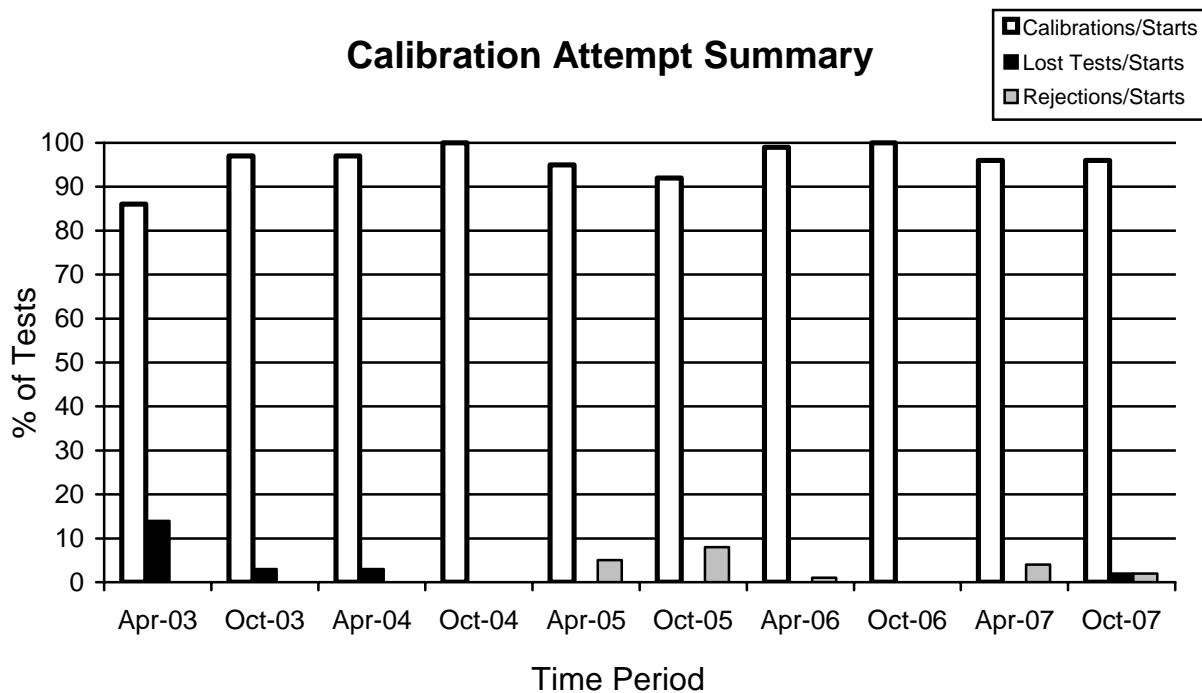

The following table summarizes the status of the reference oil test results reported to the TMC this report period:

Elastomer Type		TMC Validity	No. of Test Oil Results
Fluoroelastomer	Operationally and Statistically Acceptable	AC	13
	Statistically Unacceptable	OC	0
	Operationally Invalid	LC	0
	Aborted	XC	0
	Information Only	NN	0
	Elastomer Batch Approval	AG	4
Polyacrylate	Operationally and Statistically Acceptable	AC	13
	Statistically Unacceptable	OC	0
	Operationally Invalid	LC	0
	Aborted	XC	0
	Information Only	NN	0
	Elastomer Batch Approval	AG	8
Nitrile	Operationally and Statistically Acceptable	AC	10
	Statistically Unacceptable	OC	1
	Operationally Invalid	LC	1
	Aborted	XC	0
	Information Only	NN	0
	Elastomer Batch Approval	AG	0
	TOTAL		50

The following chart shows the laboratory bath distribution for data reported during this report period:

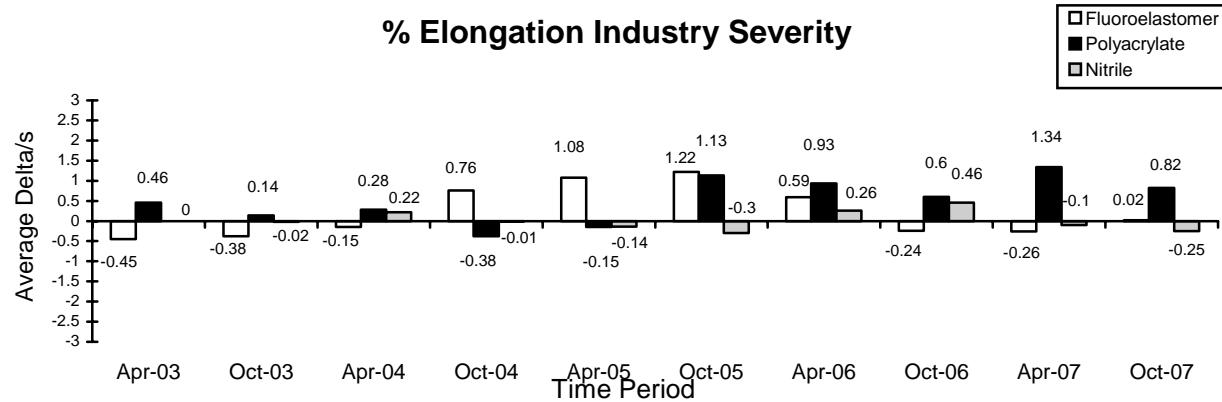

Attempted calibration tests are depicted graphically below by report period:

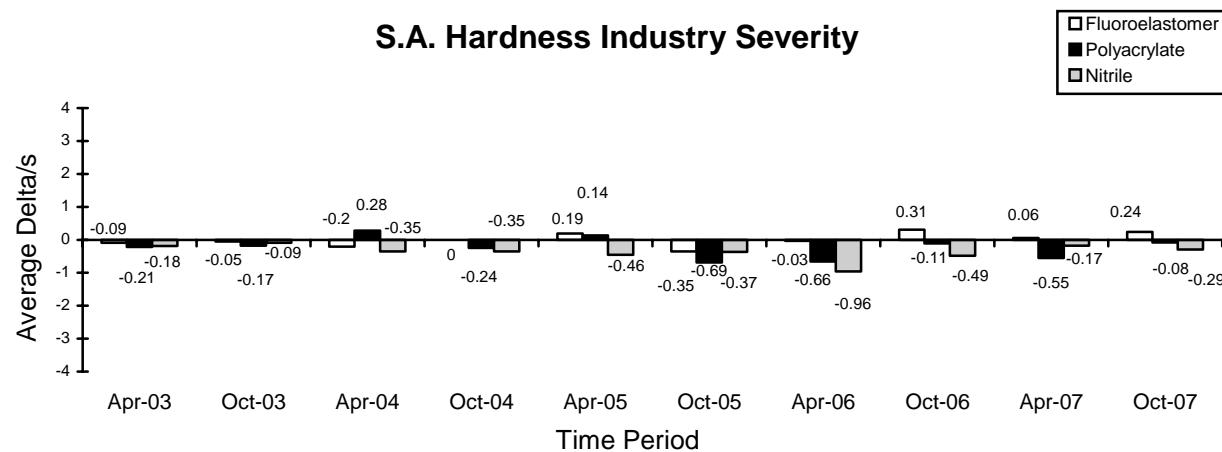

The calibration per start rate remained the same, the lost test per start rate has increased, and the rejected per start rate has decreased when compared to the last report period.

INDUSTRY TEST SEVERITY

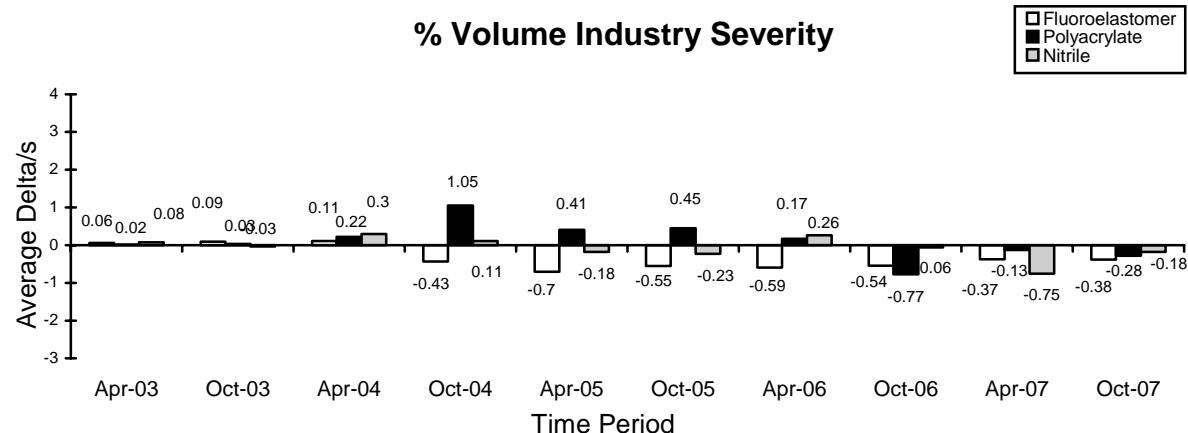

Percent elongation industry mean delta/s bar charts for the last ten report periods, for each elastomer material are shown below. Percent elongation for fluoroelastomer and polyacrylate materials trended mild for this report period. Percent elongation for nitrile trended severe this report period

S.A. hardness industry mean delta/s bar charts for the last ten report periods, for each elastomer material are shown below. S.A. hardness for polyacrylate and nitrile materials trended severe for this report period. S.A. hardness for fluoroelastomer trended mild this report period

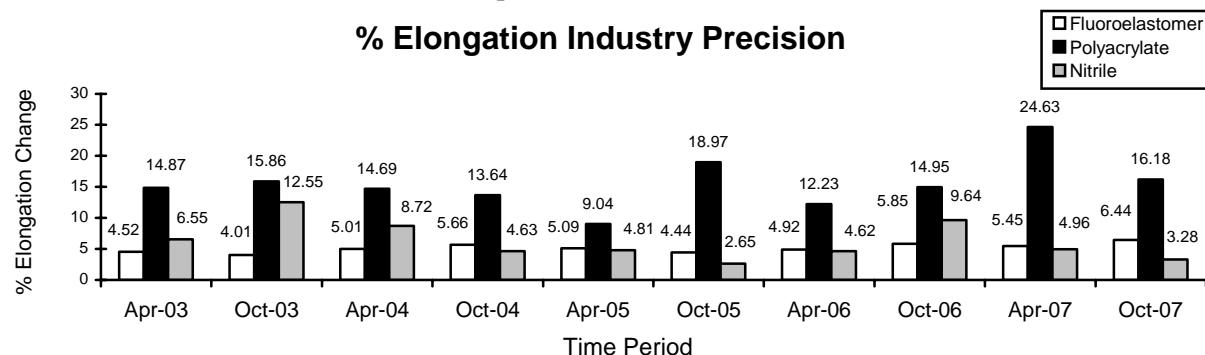

Percent volume industry mean delta/s bar charts for the last ten report periods, for each elastomer material are shown below. Percent volume for the polyacrylate, fluoroelastomer and nitrile materials trended severe of target for this report period.

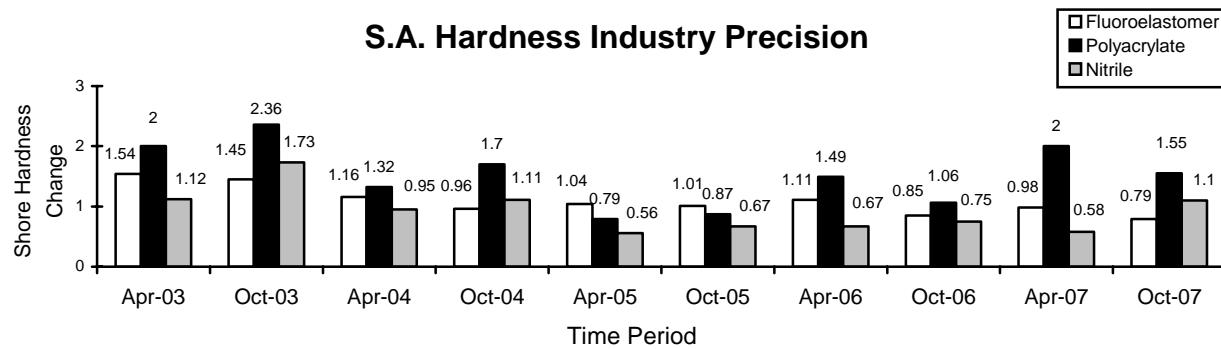

INDUSTRY TEST PRECISION

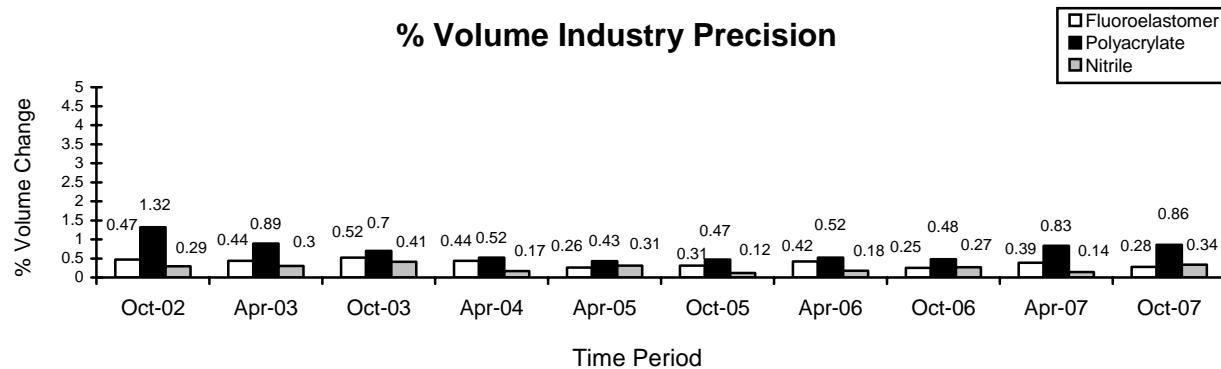

Percent elongation industry precision estimates for elastomer material, for the last ten report periods are shown below. Precision for the fluoroelastomer elastomer has degraded with respect to the previous period. Precision for the polyacrylate and nitrile elastomer have improved with respect to the previous period. Precision for all three elastomers compares well with historical levels.

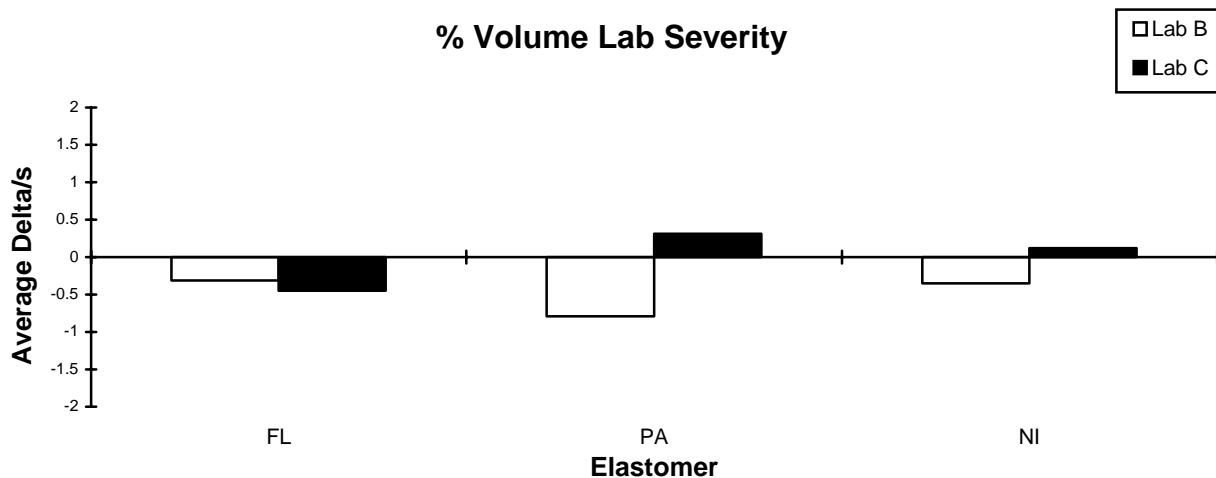

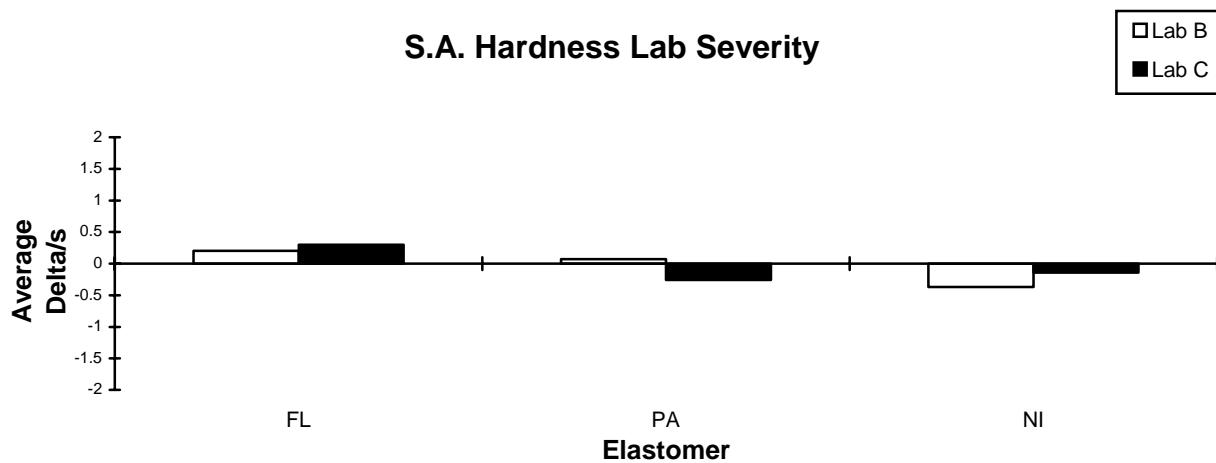

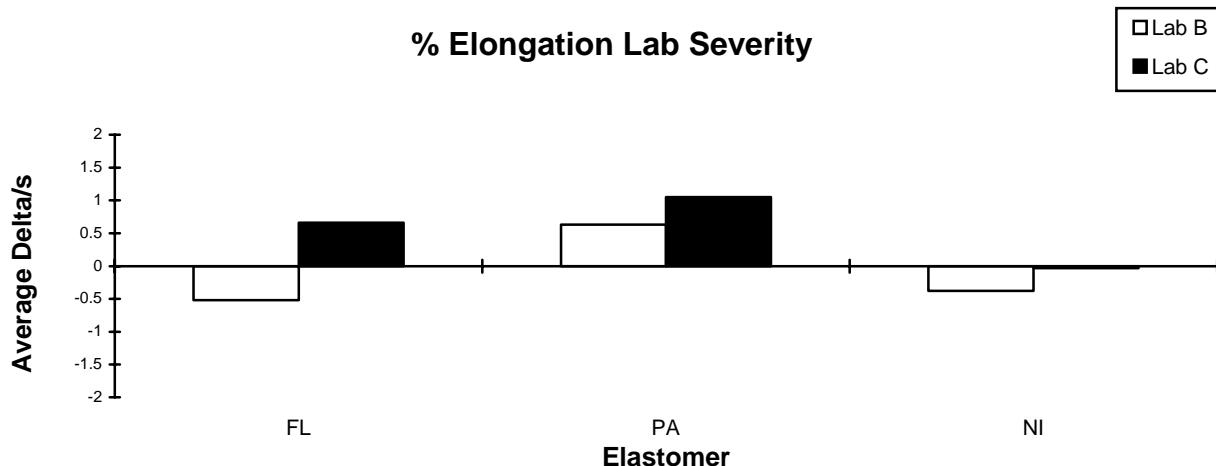

Shore hardness industry precision estimates for elastomer material, for the last ten report periods are shown below. Precision for the polyacrylate and fluoroelastomer elastomers have improved with respect to the previous period. Precision for the nitrile elastomer has degraded with respect to the previous period. Precision for all three elastomers compares well with respect to historical levels.

Percent volume industry precision estimates for elastomer materials, for the last ten report periods are shown below. Precision for polyacrylate and nitrile elastomers has degraded slightly with respect to the previous period. Precision for fluoroelastomer elastomers has improved slightly with respect to the previous period. Precision for all three elastomers compares well with respect to historical levels.

Shown below is a summary of the average Percent Elongation, S.A. Hardness, and Percent Volume Δ/s by elastomer for all laboratories reporting data this report period.

INDUSTRY CONTROL CHARTS

Figures 1 through 3 are industry control charts for elongation change, shore hardness change, and percent volume change, respectively. Figures 4 through 6 are industry control charts of the last 120 test results for elongation change, shore hardness change, and percent volume change, respectively. Severity and precision EWMA charts for elongation change, shore hardness change, and percent volume change were all in control this period.

REFERENCE OILS

The following table quantifies each reference oil by the number of reference oil containers remaining at the TMC and each laboratory. Each reference oil container has 750 ml (0.2 gallons) of oil.

LAB	160-1	161-1	168
B	4	5	4
C	7	11	5
TMC	605	160	225

INFORMATION LETTERS

There was one information letter issued this report period. Information Letter 07-01, Sequence Number 10 was issued on September 1, 2007. Items changed with this information letter are documented in the OSCT timeline (Table 1).

TMC LAB VISITS

There was one lab visit conducted this report period with no discrepancies noted.
