October 24, 2012

To Participants of the ASTM International Heavy Duty Rating Workshop:

The ASTM International Heavy Duty Rating Workshop was held on October 2-4, 2012 in San Antonio, TX. Enclosed are the minutes for the workshop and a copy of all of the data generated.

We would like to take this opportunity to thank you for your participation in this workshop. It is the full participation of the entire rating community that allows the rating methods of Manuals 20 and 21 to be the vital industry tools that they are. The input of each and every rater is a valued component of that tool. Any feedback on improving the workshop is welcome.

Sincerely,

Michael T. Kasimirsky
Workshop Coordinator

Notes on the Data

Following is the data produced during the October 2-4, 2012, ASTM International Heavy Duty Rating Workshop.

Some of the evaluation techniques are destructive and, therefore, do not easily allow repeated measurement (measurable sludge deposits, ring sticking, carbon probing, and parts wiping for example). Every effort is made to limit the destructive impact of repeated measurement of these deposits but repeatability and reproducibility cannot help but be adversely affected. This must be a consideration when reviewing data from deposits of this type.

The statistics presented include the data from all parts (including calibration parts and practical application parts) and all participants (including novice, field, and standardized engine test raters). It is important to have some knowledge of the raters involved when comparing results.

ASTM International strives to make this data useful to as broad a range of industry consumers as possible, however it is primarily intended to provide guidance to workshop participants. ASTM International endorses its use for no other purpose.

Heavy Duty Rating Workshop

October 2-4, 2012

San Antonio, Texas

Tuesday, October 2, 2012

The workshop began at 8:15am with 37 raters in attendance (see sign-in sheets). Michael Kasimirsky gave some opening remarks on the format of the workshop. Special thanks were given to Tony Barrera of Intertek Automotive Research for all his help in gathering the parts used at the workshop.

The format and room layouts of the workshop were reviewed, along with parts assignments and computer access instructions. Raters were also asked to confirm they received the correct serial-numbered Rust/Varnish/Lacquer Rating Scale and Sludge Depth Scale in their workshop materials.

The group then reviewed the various definitions of rubbed and non-rubbed carbon deposits and how those levels are determined. Light, Medium, and Heavy Carbon definitions were also reviewed.

At 9:05am, the group began rating the Preliminary Exercise.

At 11:45am, the group adjourned for lunch.

At 12:05pm, the room was opened to continue the rating of the Preliminary Exercise.

At 3:00pm, the group reviewed the Preliminary Exercise rating data.

At 4:45pm, the group began rating the Practical Application exercise.

At 5:30pm, the room was closed for the evening.

Wednesday, October 3, 2012

Rating of the Practical Application exercise parts continued all day, with a break for lunch at 11:45am. The room was opened at 6:00am and closed at 6:00pm for the day.

Thursday, October 4, 2012

In the morning, the group finished rating the Practical Application exercise parts and finished up data entry.

At 11:45am, the group adjourned for lunch.

At 2:00pm, the group reviewed the Practical Application exercise data.

At 5:10pm, the workshop concluded.

Discussions

Parts Modifications

Prior to the Practical Applications data review, it was noted that one of the parts, the Left Rocker Cover Baffle, had been modified at some point during the workshop. The part had been cleaned in some manner, removing deposits present on it. Those deposits were the specific reason the part was selected for inclusion in the workshop. Since the integrity of that part had clearly been compromised, it was completely removed from the workshop results.

Heavy Duty Rating Workshop

October 2-4, 2012

San Antonio, Texas

"Bracketed" Undercrown Rating

At the start of the workshop, the use of actual ratings, and not "bracketed" ratings, for the undercrown of C13-type and 2-Piece pistons was discussed. During the Practical Applications data review, it was clear that some confusion remained on the subject, as some raters had bracketed their ratings, while others had not done so, creating a large, artificial variation in the data. To eliminate the effects of the two different rating methods used, the undercrown data was excluded from the calculations on all C13-type and 2-Piece pistons.

Sludge Position Ratings

During the Practical Applications data review, it was discovered that two of the raters had entered their rating data in random positions, rather than in the actual locations where the ratings were taken. This made any comparisons of their individual ratings to the rest of the group impossible. However, it also had larger implications on the rest of the attendees.

One part had sludge deep enough to require the use of a rating gauge in two locations on it, which was completed once for all participants. These two positions were entered globally for all raters to assure that the gauge readings were entered correctly. The two individuals who incorrectly entered their data ended up causing large errors in the results. Those errors were corrected for the final report, but the real-time data review of that part became useless. Real-time review of the overall Sludge color codes was also impossible because of this error.

Future Workshops

The next Light Duty Rating Workshop will be held on April 16-18, 2013, at this same location.

The next Heavy Duty Rating Workshop will be held on October 8-10, 2013, at this same location.
