April 19, 2017

To Participants of the ASTM International Light Duty Rating Workshop:

The ASTM International Light Duty Rating Workshop was held on April 3-7, 2017, in San Antonio, TX. Enclosed are the minutes for the workshop and a copy of all of the data generated.

We would like to take this opportunity to thank you for your participation in this workshop. It is the full participation of the entire rating community that allows the rating methods of Manuals 20 and 21 to be the vital industry tools that they are. The input of each and every rater is a valued component of that tool. Any feedback on improving the workshop is welcome.

Sincerely,

A handwritten signature in black ink that reads "Michael T. Kasimirsky". The signature is fluid and cursive, with "Michael" and "T." being more formal and "Kasimirsky" being more fully cursive.

Michael T. Kasimirsky
Workshop Coordinator

Notes on the Data

Following is the data produced during the April 3-7, 2017, ASTM International Light Duty Rating Workshop.

Some of the evaluation techniques are destructive and, therefore, do not easily allow repeated measurement (measurable sludge deposits, ring sticking, carbon probing, and parts wiping for example). Every effort is made to limit the destructive impact of repeated measurement of these deposits but repeatability and reproducibility cannot help but be adversely affected. This must be a consideration when reviewing data from deposits of this type.

The statistics presented include the data from all parts and all participants. It is important to have some knowledge of the raters involved when comparing results.

ASTM International strives to make this data useful to as broad a range of industry consumers as possible, however it is primarily intended to provide guidance to workshop participants. ASTM International endorses its use for no other purpose.

Light Duty Rating Workshop

April 3-7, 2017

San Antonio, Texas

Monday, April 3, 2017

The workshop began at 1:00pm with 12 raters in attendance (see sign-in sheet) for the Session A. Michael Kasimirsky gave some opening remarks on the format of the workshop. Special thanks were given to Lucio Dominguez of Intertek Automotive Research for all their help in gathering the parts used at the workshop.

The format and room layouts of the workshop were reviewed, along with parts assignments and computer access instructions. Raters were also asked to confirm they received the correct serial-numbered Rust/Varnish/Lacquer Rating Scale and Sludge Depth Scale in their workshop materials.

For 2017, a group of raters who achieved "non-yellow" color codes at the 2016 Light Duty Rating Workshop were identified. This group of raters was invited to Session A of the Light Duty Rating Workshop, which was used to set the rating targets for all parts in both sessions. Of the 13 raters identified as possible "target raters," 12 raters were in attendance in Session A.

In addition, all individual merit ratings made by the raters are limited to values in the tenths of merits, as specified in Manual 20. In the past, individual merit ratings could be entered in units down to the hundredths of merits, which is a smaller breakdown than is specified as allowable in Manual 20.

New data entry methods for carbon values were also implemented for this workshop. All carbon ratings are to be entered as character values (HC, LC) instead of the specific merit values. This should help to eliminate data entry errors when entering carbon values.

Also for this workshop, a Minimum Standard Deviation was implemented for all analyses of individual ratings. For all rated locations in this workshop, a minimum standard deviation of 0.05 merits was implemented for the calculations on those ratings. This value is based on one half of the minimum resolution of the measurement tool, which is 0.1 merits for Manual 20 ratings. Any rated location that results in a standard deviation smaller than 0.05 merits will have the minimum standard deviation used for all calculations.

In addition to the T8 fluorescent sludge lights that were recently put into use, a set of LED sludge lights were set up at this workshop for evaluation. These lights use the same fixtures as the new T8 fluorescent lights, but have been converted to LED using two CREE LED conversion kits per fixture. The raters were asked to provide their feedback on how the LED lights compare to the fluorescent lights.

At 1:35pm, the group began rating the workshop parts.

At 5:45pm, the group reviewed the pistons A1, B1, and C1 as a preliminary review.

At 6:10pm, the preliminary data review ended and the group adjourned for the day.

Tuesday, April 4, 2017

Rating of the workshop parts by the Session A raters continued all day, with a break for lunch at 11:55am. The room was opened at 6:30am and closed at 5:50pm for the day.

Light Duty Rating Workshop

April 3-7, 2017

San Antonio, Texas

Wednesday, April 5, 2017

The room was opened for rating at 6:30am and the Session A group finished rating the workshop parts.

At 8:10am, Session B of the workshop began with 19 raters in attendance (see sign-in sheet). Special thanks were given to Lucio Dominguez of Intertek Automotive Research for all their help in gathering the parts used at the workshop.

The format and room layouts of the workshop were reviewed, along with parts assignments and computer access instructions. Raters were also asked to confirm they received the correct serial-numbered Rust/Varnish/Lacquer Rating Scale and Sludge Depth Scale in their workshop materials. The changes to the workshop format for 2017 that were outlined at the start of Session A were also reviewed.

At 9:15am, the Session B raters began rating the workshop parts.

At 10:05am, the Session A raters began their final data review.

At 12:00pm, the Session A raters concluded their data review and both groups adjourned for lunch.

At 12:45pm, the Session B raters resumed rating the workshop parts, while the Session A raters, who were not remaining at the workshop to provide training, were finished with the workshop. Rating continued until 6:10pm, with some raters receiving additional training, as the need was identified by the workshop data.

Thursday, April 6, 2017

Rating of the workshop parts by the Session B raters continued all day, with a break for lunch at 12:00pm. The room was opened at 6:30am and closed at 6:25pm for the day, with some raters receiving additional training, as the need was identified by the workshop data.

Friday, April 7, 2017

Rating of the workshop parts by the Session B raters was completed by 9:00am and the group began the final data review of the workshop parts. The final data review was completed at 10:50am and the workshop adjourned.

Discussions

GMOD Piston Ratings

During Session A of the workshop, the issue of properly identifying the front and rear of the GMOD pistons was raised with the group. To avoid confusion and assure that all attendees were rating the correct locations of the piston, a blue dot was placed on the Thrust side of the bottom of the piston skirt (on an unrated area) using a paint pen. Signs were placed in each booth to indicate the meaning of these markings.

Light Duty Rating Workshop

April 3-7, 2017

San Antonio, Texas

Sequence IIH Piston Ratings

During Session A of the workshop, the issue of properly rating Groove 1 and Land 2 of the Sequence IIH pistons was raised with the group. These locations of the piston have a coating applied to them, which can cause some confusion in regards to what is the correct intensity value to apply to a coated area that is free of deposits. After some discussion amongst the Session A raters, it was decided to rate these coated areas, with no deposits, between 3 and 4 on the Rust/Varnish Scale. Signs were placed in each booth to note this requirement.

Sludge Ratings

The sludge parts provided for the workshop were some of the most heavily coated with sludge deposits that have ever been provided for the workshop. While this might have been viewed as a positive attribute, it did have some unintended consequences as it relates to rating sludge at the workshop.

Sludge rating requires using a metal gauge to determine sludge depth for any sludge levels above the "C" level on the sludge rating scale. Using a gauge to measure sludge is not something that can be repeated by the 20+ attendees at the workshop, so these locations are measured with a gauge by one rater, with those gauged results being used by all workshop attendees.

Of the sludge parts at this workshop, the Oil Pan had nine (of 20) rating locations measured with a gauge. The Oil Pan Baffle had five locations, the Left Valve Deck had four locations, and the Right Valve Deck had two locations.

This resulted in artificially-tight rating results on the four parts with measurable sludge, due to all raters using the exact same assigned values for these locations. For example, on the Oil Pan, nine of 20 locations were defined to be identical. This removed any variability from these locations, unlike the other 11 locations on the Oil Pan. The gaugable sludge areas on the other three parts had a similar effect on the results.

As a result, the BRW Color Codes for Sludge for this workshop are not reflective of rater performance and should not be given too much credence when compared to the results of past workshops.

Minimum Standard Deviation

For this workshop, a Minimum Standard Deviation of 0.05 merits was implemented for all Yi calculations on the individual rating locations. While all present agreed that this was a step in the right direction, several of the raters expressed a desire to see this value raised from 0.05 merits to 0.1 merits. No resolution was reached on making any changes to this value.

Light Duty Rating Workshop

April 3-7, 2017

San Antonio, Texas

Use of LED Lighting in Rating

The possible use of LED lighting for rating applications was discussed at this workshop. Due to Federal regulations, fluorescent lighting is on its way out. To evaluate the use of LED lighting in rating, two sludge light fixtures were converted to LED using two CREE LED conversion kits per fixture. These two LED fixtures were set up in a third sludge booth so that the sludge parts could be rated using LED lighting.

The data generated using LED lighting will not be used for any color code calculations at this workshop.

Future Workshops

The next Heavy Duty Rating Workshop will be held on October 2-6, 2017, at this same location.

The next Light Duty Rating Workshop will be held in April 2017.

A series of handwritten signatures in black ink, each consisting of a first name and a last name, are written across several horizontal lines. The signatures include: Richard Arrizon, Jonathan Bolaney, Jonathon Cales, Bryan Campbell, David Caproni, George Castillo, Vanessa DeCapite, Paul Greenland, Matthew Hayden, Jennifer King, Daniel Kunk, Mike Langford, Jie Li, Jimmy Pitta, Jesse Rodriguez, Dennis Swanson, Ken Terrado, Victor Veiga, and Ralph B. Viera.

Welcome to the Light Duty Rating Workshop

- Please sign in and pick up your rating scales packet.
- Rating Worksheets are at the front of the room.

Light Duty Rating Workshop

April 2017

Volunteers

- Thank you to Lucio Dominguez and the Intertek Staff for their support and for providing parts for the workshop.

Rating Workshop Server Info

- To access the workshop server, access the local wireless network called “[depositworkshop](#)”
- The wireless network password is “[lightduty2017](#)”
- Workshop Web Address: <http://192.168.1.110/>
- Enter your *username* (printed in red on the summary page in your packet) in the “password” field on the entry screen. [Leave “TMC” in the other field.]
- If individual ratings do not auto-calculate, [stop and get help before entering additional data!](#)

New Rating Scales

- New Rust/Lacquer/Varnish scale included.
- New Sludge Rating Photo scale included.
- Please verify the serial number of both scales in your packet against the numbers listed on the summary page in your packet.
- *Rating Worksheets and a copy of the Room Layout are not included in the packet, but are available on the table at the front of the room.*

Rating Manuals

ASTM Headquarters supplies:

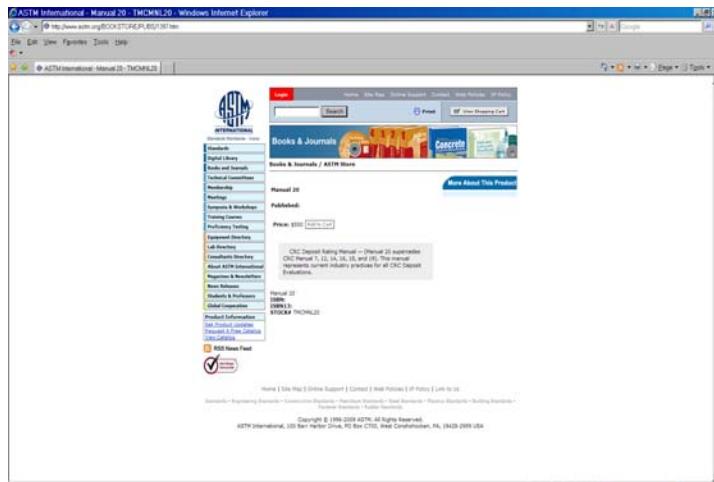

- TMC Manual 20 – Deposits
- TMC Manual 21 – Distress
 - Scales included

Go to : WWW.ASTM.ORG

Rating Manuals 20 & 21

Workshop Format

- Light Duty Piston Deposits
 - Three “Letter Sets” of Pistons
 - Two IIIG Pistons
 - Two IIIH Pistons
 - Two GMOD Pistons
- Sequence V Varnish
 - Two Sequence VG piston sets (8 pistons per set)
 - Two Sequence VH piston sets (8 pistons per set)
 - Right & Left Rocker Cover Baffle

Workshop Format (Continued)

- Engine Sludge (Seq. V)
 - Right & Left Rocker Cover
 - Right & Left Rocker Cover Baffle
 - Timing Chain Cover
 - Oil Pan & Oil Pan Baffle
 - Right & Left Valve Deck
- Induction & Combustion
 - Piston Tops (8)
 - Intake Valves (two sets of 8 valves)
- Sludge & Debris
 - Seq. V Oil Screen

Workshop Format (Continued)

- Data Review & Discussion

Parts Assignments

- Two Sets of “Lettered” parts (A, B, C)
 - Four Sequence IIIG Pistons
 - Four Sequence IIIH Pistons
 - Four GMOD Pistons
- One Set of Sequence VG Pistons (8 pistons)
- One Set of Sequence VH Pistons (8 pistons)
- LED Lighting Evaluation

Parts Assignments (cont.)

- Parts assignments are the minimum required.
- Additional ratings are always advantageous.
- You’re always free, and encouraged, to rate additional parts, if time allows.
- Any sludge deposit ratings of “C” depth or greater will be provided; i.e. no “gauging” of sludge will be required, **or permitted**, at the workshop.

Parts Modifications

- No modifications to any parts is permitted during the rating workshop.
 - Do not pick at or remove any deposits present on the parts.
 - Removing deposits from a part, to determine the deposit depth (or any other reason), is not permitted.
 - Any part found to be modified in this manner will be removed from the workshop calculations.

Use of Non-Standard Lighting

- Manual 20 lists specific requirements for the lighting color temperature and illumination level required for rating. (page 15)
- Sufficient lighting for rating is provided at each rating workstation.
- The use of non-standard lighting is not permitted.
 - No flashlights.
 - Ratings generated using non-standard lighting may be removed from the workshop results.

Workshop Changes for 2017

- Use of “Target Rater Group” for establishing Workshop Targets.
- New Merit Scale Breakdown Limits.
- New Method for Entering Carbon Ratings.
- Implement a Minimum Standard Deviation for results calculations.
- LED Lighting Evaluation

Merit Rating Scale

- **Merit Rating** – Amount of a distress or deposit in numerical terms on a descending scale from ten (10), which represents absence of distress or deposits. (page 10)
 - Even though the scale is in whole number increments, it is permissible to assign deposit factors in tenths of a number in an effort to accurately describe the intensity level. (page 16)
- **Merit rating values in increments smaller than tenths of a merit are not permitted.**

Groove Deposit Review

| Typical Illustration | | | |
|--------------------------|------|------------|------|
| Clearance Fill | 100% | >25% <100% | ≤25% |
| Description | HC | MC | LC |
| Deposit Factor (Demerit) | 1.00 | 0.50 | 0.25 |
| Deposit Factor (Merit) | 0.00 | 0.50 | 0.75 |

HC = heavy carbon
 MC = medium carbon
 LC = light carbon

Note that small-bore pistons only use two levels of carbon,
 Heavy Carbon (HC) & Light Carbon (LC).

Recording Carbon Levels

- Carbon Merit Ratings are to be recorded using text values, not numbers, in the workshop software.
 - HC Heavy Carbon (0.00 merits)
 - LC Light Carbon (0.75 merits)
 - Text values ARE CASE SENSITIVE

Results Calculations

- Implementation of a “Minimum Standard Deviation” for all results calculations.
 - Smallest measurement increment allowed by the methods listed in Manual 20 is 0.1 merits.
 - Good engineering practice for making a measurement is to limit the measurement to one half of the smallest measurement unit on the instrument.
 - **Based upon these factors, 0.05 merits is the smallest standard deviation that will be used in all parts calculations.**
 - Values larger than this limit will be used as calculated.

LED Lighting Evaluation

- Two fluorescent sludge light fixtures were converted to LED using two CREE LED conversion kits per fixture.
- These lights are set up in the center sludge booth.
- All sludge parts are to be rated using LED lighting, after rating with fluorescent light.
- Please move parts to the LED booth for rating and then return them to the original booth when done.
- These LED rating are *in addition* to the “conventional” ratings of the sludge parts.
- Please rate as many parts as you have time to do, so that we can evaluate this technology.

Workshop Color Codes

- Light Duty Piston Deposits (minimum of 6 parts needed)
 - "Lettered" Piston sets
 - Six Sequence IIIG Pistons
 - Six Sequence IIIH Pistons
 - Six GMOD Pistons
- Sequence V Varnish (minimum of 24 parts needed)
 - Rocker Baffle Varnish
 - Two Sequence VG Piston Sets (8 pistons per set)
 - Two Sequence VH Piston Sets (8 pistons per set)

Workshop Color Codes (cont.)

- Sludge (minimum of 6 parts needed)
 - Complete Sequence VG Engine sludge rating
 - Rocker Covers
 - Rocker Cover Baffles
 - Valve Deck Sludge
 - Timing Chain Cover
 - Oil Pan
 - Oil Pan Baffle
- Induction & Combustion (minimum of 6 parts needed)
 - Intake Valves
 - Piston Tops
